EXECUTIVE SUMMARY

This supplemental Initial Site Assessment (ISA) was conducted for the Burlington Northern and Santa Fe Railway (BNSF) Mount (Mt.) Vernon Avenue Bridge Project (project) over the BNSF Railroad Yard in San Bernardino, California. Historical research, document review, and site assessment activities were conducted in January and February 2018. In general, the following items were noted.

- The site includes an approximate 2,700-foot stretch of Mt. Vernon Avenue (including the bridge and its approaches) from West Rialto Avenue in the south to West 5th Street in the north. The shoofly includes an approximately 6,000-foot long area in the BNSF Intermodal Facility running north of and adjoining to the existing tracks. The area extends from approximately 1,500 feet west of the bridge to approximately 3,000 feet east of the bridge to the intersection of the railroad tracks and West 5th Street. Other portions of the site include a residential neighborhood between West 4th Street and West Kingman Street, portions of the BNSF Intermodal Facility north of the shoofly, a vacant lot west of the bridge and north of West 3rd Street, residential properties and a car wash west of Mt. Vernon Avenue and north of West 2nd Street, and vacant land east of Mt. Vernon Avenue north and south of West 2nd Street.
- Based on the findings of this ISA, a total number of two onsite Historical Recognized Environmental Conditions (HRECs) and seven onsite Recognized Environmental Conditions (RECs) (does not include four potential/conditional RECs) have been identified for the site. The HRECs and RECs for the site are discussed below.
- Soil underlying the northern portion of the bridge within BNSF property has been impacted with total petroleum hydrocarbons (TPH) from historical railway operations. Impacted soil in areas adjoining the northern end of the bridge on both the east and west sides of the bridge was excavated between May 1994 and February 1995. Regulatory closure for impacted soil was granted in May 2003. However, portions of impacted soil may still be in place underneath the bridge. Additionally, the results of Ninyo & Moore's 2013 Limited Subsurface Investigation (LSI) encountered TPH in borings DP-3 and DP-4A, which were drilled underneath the northern section of the bridge. This is considered a REC.
- Elevated concentrations of constituents of concern (metals, tetrachloroethylene [PCE], TPH, and semi-volatile organic compounds [SVOCs]) were reported in soil samples collected from the shoofly, San Bernardino County Transportation Authority (SBCTA), and BNSF properties during a LSI conducted by Ninyo & Moore in 2013; namely lead which was found at concentrations indicating hazardous characterization. On the shoofly alignment, some of the soil disturbed during earthmoving activities may be classified as a hazardous waste with respect to lead. Therefore, special considerations may be necessary for handling some excavated soil for the project. This is considered a REC.
- A Vapor Extraction/Vapor Treatment System (VES/VTs) was installed to remediate solvent contaminated soil in the immediate vicinity of the former diesel shops in the proposed shoofly track area on BNSF property. A No Further Action (NFA) was issued for the solvent contaminated soil and groundwater by the RWQCB and a closure letter was issued for the BNSF property in 2006 and 2011. This is considered an HREC.
- An NFA letter for the ex-situ remediation of eight areas of the BNSF Rail Yard was issued on March 3, 2004. The areas where excavation had occurred, which were previously impacted by TPH, heavy metals, or brine, included the new and former Industrial Wastewater

Treatment Plant, former Brine Ponds, Mt. Vernon Avenue area, former Car Shops, former Diesel Shops, and former Union Pacific Railroad Facility. The presence of these former excavation areas is considered an HREC.

- A fueling area, an oil/water separator system, and two wash pads are adjacent and north of the shoofly and west of the bridge. The fueling area contains a 6,000-gallon diesel aboveground storage tank (AST), a 2,000-gallon gasoline AST, two 240-gallon diesel ASTs, two 240-gallon unleaded fuel ASTs, twenty 55-gallon drums (empty, used filters, antifreeze, motor oil, parts cleaner, hydraulic oil, aerosols) on secondary containment, two 330-gallon ASTs with diesel exhaust fluid, five 300-gallon ASTs (hydraulic fluid, diesel oil, motor oil, transmission oil, detergent), and a small storage shed containing a parts cleaner, two fire closets (aerosols, gasoline, lube oil, paints), four 55-gallon drums of clean and used motor oil. Surface staining was observed on concrete around the stored petroleum products. This is considered a *de minimis* condition, and is not a REC to the site, unless excavation and earthmoving is proposed in this area.
- Two 55,000-gallon fuel ASTs were present north of the shoofly and west of the bridge from 1938 through 1968; these are not considered RECs to the site.
- The site was on and adjoining to multiple roadways, including State Route 66, and the Atchison, Topeka & Santa Fe (ATSF)/BNSF railroad facility prior to 1992, when leaded gasoline was utilized. Therefore, there is a potential presence of aerially-deposited lead (ADL) in shallow unpaved soil along Mt. Vernon Avenue, 4th Street, and railroad tracks at the site, which represents a REC.
- Railroad ties were observed during the site reconnaissance near the bridge and shoofly areas. It is unknown if these ties have been treated with creosote. If railroad ties have been treated with creosote, this is considered a REC to the site.
- Anita's Mexican Food Corp at 1390 West 4th Street was listed on historical underground storage tank (UST) databases (SWEEPS UST, CA FID UST). Additionally, Anita's was issued a South Coast Air Quality Management District (SCAQMD) permit to operate a gasoline storage and dispensing station in 1983 and 1990. Based on the presence of a gasoline UST on the site and lack of information regarding its removal, this information is considered a REC.
- A concrete vault, possibly an oil-water separator, was observed on vacant land north of 4th Street. The oil-water separator was probably used as a wastewater treatment system for the old restaurant, Anita's Mexican Foods Corp at 1390 West 4th Street. This is considered a REC.
- A stockpile of crushed concrete was observed on vacant land north of West 4th Street in the September 2017 ISA. This was classified as "undocumented fill" and considered a REC. However, during the site reconnaissance on February 1, 2018, the stockpile of crushed concrete was not observed. Therefore, this is no longer considered a REC.
- Two historical gasoline and oil service stations were reported at the site: the former Viscie Benedict Gas at the southwest corner of the intersection of Mt. Vernon Avenue and West 5th Street; and the former Auto Tune at the intersection of West 2nd and North Giovanola Avenue. Additionally, an Arco gasoline station with USTs is currently present at the northwest corner of Mt. Vernon Avenue and West 5th Street. Also, a car wash was observed west of North Mt. Vernon Avenue and north of 2nd Street. These facilities are not considered RECs unless soil excavation and earthmoving activities will be conducted that may encroach on these properties.

- Significant data gaps were not encountered during the preparation of this supplemental ISA report.
- Based on the historical onsite UST at Anita's Mexican Food, historical chlorinated solvent contamination of groundwater at the ATSF/BNSF facility, up-gradient drycleaner Lords Dry Cleaners at 1061 5th Street that operated between 1936 and 1990, a vapor encroachment condition (VEC) cannot be ruled out beneath the site, which is considered a REC.
- Ninyo & Moore has conducted two previous asbestos and lead-based paint (LBP) surveys in 2004 and 2010. The reports can be found in Appendix B of the January 2018 Final Initial Site Assessment (FISA). Although considered an ASTM International (ASTM) non-scope issue, based on the findings of these surveys, LBP and asbestos-containing material (ACM) may be encountered during demolition of the Mt. Vernon Avenue Bridge. This is not considered a REC.

This supplemental ISA was performed in conformance with the scope and limitations of ASTM Practice E 1527-13 for the Mt. Vernon Bridge Project and includes an expanded project area along N. Mt. Vernon Avenue between West 5th Street and West Rialto Avenue, in the city of San Bernardino, California. Any exception to, or deletions from, this practice are described in Section 1.4 of this report. This assessment has revealed no evidence of environmental conditions in connection with the site except for the following:

- Soil underlying the northern portion of the bridge within BNSF property has been impacted with TPH from historical railway operations. Impacted soil in areas adjoining the northern end of the bridge on both the east and west sides of the bridge was excavated between May 1994 and February 1995. Regulatory closure for impacted soil was granted in May 2003. However, portions of impacted soil may still be in place underneath the bridge. Additionally, the results of Ninyo & Moore's 2013 LSI encountered TPH in borings DP-3 and DP-4A, which were drilled underneath the northern section of the bridge. This is considered a REC.
- Elevated concentrations of constituents of concern (metals, PCE, TPH, and SVOCs) were reported in soil samples collected from the shoofly, SBCTA, and BNSF properties during a LSI conducted by Ninyo & Moore in 2013; namely lead which was found at concentrations indicating hazardous characterization. On the shoofly alignment, some of the soil disturbed during earthmoving activities may be classified as a hazardous waste with respect to lead. Therefore, special considerations may be necessary for handling some excavated soil for the project. This is considered a REC.
- The potential presence of ADL in shallow unpaved soil along Mt. Vernon Avenue, 4th Street, and railroad tracks at the site is considered a REC, due to the presence of adjoining roadways, including State Route 66 and the BNSF railroad facility prior to 1992, when leaded gasoline was utilized.
- Anita's Mexican Food Corp at 1390 West 4th Street was listed on historical UST databases (SWEEPS UST, CA FID UST). Additionally, Anita's was issued a SCAQMD permit to operate a gasoline storage and dispensing station in 1983 and 1990. Based on the presence of a gasoline UST on the site, and lack of information regarding its removal, this information is considered a REC.

- The presence of a concrete vault, possibly an oil-water separator, on the southern portion of the site (Anita's Mexican Food Corp at 1390 West 4th Street) is considered a REC.
- Based on the results of the vapor encroachment screening matrix (VESM), a VEC cannot be ruled out beneath the site, and is considered a REC.
- Although considered an ASTM non-scope issue, based on their age, ACM and LBP may be encountered on structures to be demolished at the site, which is not considered a REC. Appropriate surveys for these materials should be conducted prior to demolition.

Based on the results of this ISA, Ninyo & Moore makes the following recommendations:

- If proposed demolition/construction activities will impact soil beneath the following areas, a Site Investigation should be conducted consisting of collecting soil samples and analysis for petroleum hydrocarbons, volatile organic compounds (VOCs), and/or lead prior to the construction phase:
 - The extent of the proposed shoofly track area in the BNSF Intermodal Facility
 - Two former gasoline and oil service stations Viscie Benedict Gas and Auto Tune
 - Current Arco station
 - Fueling area in the BNSF Intermodal Facility
 - Anita's Mexican Food at 1390 West 4th Street
- A hazardous materials contingency plan should be prepared to address the potential for discovery of unreported USTs or other underground structures, creosote-treated railroad ties, septic systems, hazardous materials, petroleum hydrocarbons, or hazardous or solid wastes encountered during construction. This contingency plan should address UST decommissioning, field screening and materials testing methods, mitigation and contaminant management requirements, and health and safety requirements.
- Caltrans Standard Special Provisions and Non-Standard Special Provisions should be prepared that provide contractors with guidance on preparing submittals and handling impacted materials.
- A soil monitoring plan should be prepared prior to construction and should be implemented during all phases of construction. Disturbed soils should be monitored for visual evidence of contamination (e.g., staining or discoloration). If visual evidence of contamination is observed, the soil should be monitored for the presence of VOCs using appropriate field instruments such as organic vapor measurement with photoionization detectors or flame ionization detectors. If the monitoring procedures indicate the possible presence of contaminated soil, a contaminated soil contingency plan should be implemented and should include procedures for segregation, sampling, and chemical analysis of soil. Contaminated soil will be profiled for disposal and will be transported with appropriate hazardous or non-hazardous waste manifests by a state-certified hazardous material hauler to a state-certified disposal or recycling facility licensed to accept and treat the type of waste indicated by the profiling process. The contaminated soil contingency plan should be developed and in place during all construction activities. In the event that these processes generate any contaminated groundwater that must be disposed of outside of the dewatering/National Pollutant Discharge Elimination System (NPDES) process, the groundwater should be profiled, manifested, hauled, and disposed of in the same manner.

- Appropriate pre-demolition surveys for LBP and ACM of existing structures to be removed should be conducted.
- Demolition or renovation of any structure requires notification and submittal of fees to the SCAQMD.

It is understood that additional subsurface evaluation may be conducted during the design/build phase of this project. The results of our LSI in 2013 indicated the presence of TPH-impacted soil underneath the northern portion of the Mt. Vernon Ave Bridge and lead-impacted soil (as well as some TPH and PCE impacts) along portions of the shoofly area. Future construction and demolition operations should be aware of these areas and excavate, segregate, and dispose of impacted soils.

1 INTRODUCTION

The San Bernardino County Transportation Authority (SBCTA), in cooperation with the California Department of Transportation (Caltrans), is proposing to replace the existing Mount (Mt.) Vernon Avenue Bridge (Bridge Number 54C-066) over the Burlington Northern Santa Fe (BNSF) rail yard in the city of San Bernardino, San Bernardino County, California.

This supplemental Initial Site Assessment (ISA) was conducted for the BNSF Mt. Vernon Project (project) over the BNSF Railroad Yard in San Bernardino, California and is a revalidation of the supplemental ISA dated September 21, 2017 (Ninyo & Moore, 2017). The revalidation is due to an expanded project area that encompasses the Mt. Vernon Avenue Bridge (the bridge) and proposed Shoofly Track Areas east and west of the bridge (the shoofly), residential properties between North Mt. Vernon Avenue and Cabrera Avenue northwest of the BNSF facility evaluated in Ninyo & Moore's ISA submitted September, 2017 (Ninyo & Moore, 2017), as well as additional parcels within the BNSF property and adjoining properties east and west of Mt. Vernon Avenue (site; Figure 1). The following sections state the purpose, involved parties, scope of services, and limitations and exceptions associated with this supplemental ISA.

1.1 Purpose

The objective of the supplemental ISA is to evaluate, in general accordance with the process described in ASTM International (ASTM) Practice E 1527-13, recognized environmental conditions (RECs), which are defined by ASTM as “the presence or likely presence of any hazardous substance or petroleum products in, on, or at a property: (1) due to a release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.”

As defined in ASTM E 1527-13, *de minimis* conditions are not considered RECs. A *de minimis* condition is defined as “a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.”

Identification of RECs fall into three categories: existing RECs (as defined above); Historical RECs (HRECs); or Controlled RECs (CRECs).

- HREC – A HREC is defined as “a past release of any hazardous substance or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations [AULs], institutional controls, or engineering controls).”

- CREC – A CREC is defined as “recognized environmental conditions resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action (NFA) letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, AULs, institutional controls, or engineering controls).”

1.2 Involved Parties

Mr. Dennis Fee of Ninyo & Moore conducted the site reconnaissance on February 1, 2018. Mr. Fee also conducted regulatory inquiries, historical research, and document review. Mr. Patrick Cullip and Mr. John Jay Roberts of Ninyo & Moore performed project oversight and quality review. Resumes of professionals conducting this ISA are provided in Appendix A. This supplemental ISA was prepared for AECOM, on behalf of the SBCTA.

1.3 Scope of Services

The scope of services for this supplemental ISA included the following:

- Review readily available maps and reports pertaining to the site.
- Conduct an interview with a property representative, if available during the site visit, regarding the environmental status of the site.
- Perform a site reconnaissance to document existing hazardous materials handling, storage, and disposal practices, areas of possibly contaminated surficial soil or surface water, possible sources of polychlorinated biphenyls (PCBs), underground storage tanks (USTs) and aboveground storage tanks (ASTs), and possible sources of contamination from activities at the site and adjoining properties.
- Review readily available historical documents, including aerial photographs, Sanborn Fire Insurance Rate maps, and historical topographic maps.
- Review federal, state, tribal, and local regulatory agency databases for the site and for properties located within a specified radius of the site. The databases are intended to document locations of known hazardous waste sites, landfills, leaking underground storage tanks (LUSTs), and permitted facilities that utilize USTs.
- Prepare this supplemental ISA report for the site. The supplemental ISA report documents the findings and provides opinions and recommendations regarding possible environmental impacts at the site. Color photographs are provided in the report (Appendix B).

1.4 Limitations and Exceptions

The environmental services described in this report have been conducted in general accordance with current regulatory guidelines and the standard-of-care exercised by environmental

consultants performing similar work in the project area. No warranty, expressed or implied, is made regarding the professional opinions presented in this report.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Ninyo & Moore should be contacted if the reader requires any additional information or has questions regarding the content, interpretations presented, or completeness of this document.

The findings, opinions, and conclusions are based on an analysis of the observed site conditions and the referenced literature. It should be understood that the conditions of a site could change with time as a result of natural processes or the activities of man at the subject property or nearby sites. In addition, changes to the applicable laws, regulations, codes, and standards of practice may occur due to government action or the broadening of knowledge. The findings of this report may, therefore, be invalidated over time, in part or in whole, by changes over which Ninyo & Moore has no control. Ninyo & Moore cannot warrant or guarantee that not finding indicators of any particular hazardous material means that this particular hazardous material or any other hazardous materials do not exist on the site. Additional research, including invasive testing, can reduce the uncertainty, but no techniques now commonly employed can eliminate the uncertainty altogether. Geotechnical exploration will be performed at the site in preparation for construction of proposed improvements. Geotechnical exploration is not included as part of this ISA.

1.5 Special Terms and Conditions

This study did not include an evaluation of geotechnical conditions or potential geologic hazards. In addition, unless otherwise indicated in this report, this ISA does not include analysis of the following: asbestos-containing materials (ACMs), methane gas, radon, lead-based paint (LBP), lead in drinking water, underground pipelines, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, or high voltage power lines.

1.6 User Reliance

This report may be relied upon by, and is intended exclusively for the client. Any use or reuse of the findings, opinions, and/or conclusions of this report by parties other than these is undertaken at said parties' sole risk.

1.7 Physical Limitations

The site reconnaissance was limited to views from public right-of-ways, including views of private parcels within the project boundary. Observations of the interiors of buildings were not performed. At the time of the site reconnaissance, the weather was sunny and clear.

1.8 Data Gaps

Significant data gaps were not encountered during the preparation of this ISA report. As mentioned in Section 1.7, private parcels proposed as temporary construction easements (within the boundary of the site displayed in Figure 2) were observed during the site reconnaissance from public right-of-ways, but the observations of the interiors of buildings were not performed.

2 SITE DESCRIPTION

The following table provides a general description of the subject site. Photographs taken during the site reconnaissance are provided in Appendix B.

Table 1 – General Site Setting	
General Site Setting	Description
Location	The site includes an approximate 2,700-foot stretch of Mt. Vernon Avenue (including the bridge and its approaches) from West Rialto Avenue in the south to West 5 th Street in the north. The shoofly includes an approximately 6,000-foot long area in the BNSF Intermodal Facility running north of and adjoining to the existing tracks. The area extends from approximately 1,500 feet west of the bridge to approximately 3,000 feet east of the bridge to the intersection of the railroad tracks and West 5 th Street. Other portions of the site include a residential neighborhood between West 4 th Street and West Kingman Street, portions of the BNSF Intermodal Facility north of the shoofly, a vacant lot west of the bridge and north of West 3 rd Street, residential properties and a car wash west of Mt. Vernon Avenue and north of West 2 nd Street, and vacant land east of Mt. Vernon Avenue north and south of West 2 nd Street. The site location is presented in Figure 1.
Site Use / Occupants	The bridge is a public street maintained by the City of San Bernardino. The proposed shoofly is located within the BNSF Intermodal Facility. The facility is currently occupied by BNSF and its contractors. Other portions of the site are occupied by residences, some commercial properties, and vacant land.
Structures	Structures were not observed on the bridge, its approaches, or the shoofly. Structures were observed in other areas of the site, including a structure north of the shoofly and east of Mt. Vernon Avenue in the BNSF Intermodal Facility used as an office and auto repair center, numerous residential structures, and a car wash structure at the northwest corner of the intersection of Mt. Vernon Avenue and West 2 nd Street.
Roads	The site is located on Mt. Vernon Avenue between West Rialto Avenue (Rialto Avenue) to the south and West 5 th Street (5 th Street) to the north. Other roadways affected by the project include West 4 th Street (4 th Street) between Mt. Vernon Avenue and Cabrera Avenue, West Kingman Street (Kingman Street), West 3 rd Street (3 rd Street), and West 2 nd Street (2 nd Street). The site is bound to the east by Interstate 215 Freeway (I-215).
Heating and Cooling Systems	Roof-mounted heating and cooling systems were observed on buildings, on and adjoining the site.
Electricity Provider	Southern California Edison
Sewer Disposal Provider	Evidence of septic systems was not observed at the site. The site is in an area that is serviced by the City of San Bernardino

Table 1 – General Site Setting

General Site Setting	Description
Potable Water Provider	Potable water is provided to the site by the City of San Bernardino Water Department
Site Vicinity Description	Primarily residential properties with commercial properties including numerous auto repair facilities, rail tracks and associated activities, and some vacant land.

3 PHYSICAL SETTING

The following sections include discussions of topographic, geologic, hydrogeologic conditions, and wetlands characterization in the vicinity of the site, based upon our document review and our visual reconnaissance of the site and adjoining areas.

3.1 Topographic Conditions

Based on a review of the United States Geological Service (USGS), 7.5-Minute Topographic Quadrangle Map Series, San Bernardino South, California, 1978 photorevised 1980, the site is situated at elevations from approximately 1,070 to 1,110 feet above mean sea level. The site and immediate vicinity are relatively flat, with regional topography sloping gently to the southeast.

3.2 Geologic and Soil Conditions

The project site is situated in the Santa Ana River Valley, in the eastern portion of the Transverse Ranges Geomorphic Province (Norris and Webb, 1990). The Geomorphic Province encompasses an area that extends 320 miles from Point Arguello and San Miguel Island in the west to the mountains of Joshua National Monument in the east, where the province merges with the Mojave and Colorado Deserts. The Geomorphic Province varies in width from 40 to 60 miles, which is primarily characterized by east-west trending mountain ranges that are underlain by Jurassic and older age igneous and metamorphic rocks (Ninyo & Moore, 2010). According to the Limited Subsurface Investigation (LSI) conducted at the site by Ninyo & Moore in 2013, soils encountered beneath the site consisted of sandy silt, silty sand, and sand from surface to the total depth explored of approximately 45 feet below ground surface (bgs).

3.3 Site Hydrology

The following sections discuss the site hydrology in terms of surface water and groundwater.

3.3.1 Surface Waters

The site does not contain natural surface water bodies. The nearest surface water body is Lytle Creek, a concrete-lined channel running northwest-southeast approximately 600 feet southwest of the western end of the shoofly.

3.3.2 Groundwater

Groundwater information for the site was available. According to information obtained from the State Water Resources Control Board's (SWRCB) GeoTracker website for the BNSF facility at 470 North L Street, regional groundwater is anticipated between 140 and 150 feet bgs at the site and flows towards the southeast. This is based on groundwater monitoring activities in September 2010 for wells 1,300 to 3,000 feet east of Mt. Vernon Avenue (ERM, 2010). According to the LSI conducted at the site by Ninyo & Moore in 2013, perched groundwater was encountered adjoining to the bridge at depths ranging from approximately 23 to 42 feet bgs. (See Sections 4.3 and 4.4 for more discussion of groundwater conditions at the site.) Groundwater levels, gradients, and flow directions can fluctuate due to seasonal variations, groundwater withdrawal or injection, changes in land use, or other factors.

4 RECORDS REVIEW

The following sections summarize records reviewed for the site.

4.1 Standard Environmental Record Source - Environmental Database Search

A computerized, environmental information database search was performed by Environmental Data Resources, Inc. (EDR) on January 11, 2018. The search included federal, state, tribal, and local databases. A summary of the environmental databases searched, their corresponding search radii, and number of noted properties of potential environmental concern, is presented in the EDR report (Appendix C). The review was conducted to evaluate whether the site or properties within the site vicinity have been documented as having experienced significant unauthorized releases of hazardous substances or other events with potentially adverse environmental effects.

4.1.1 Geocoded (Mapped) Listings

The site and off-site properties within one mile of the site were listed on various regulatory agency databases. The following table lists databases that were searched and the number of listings (excluding non-geocoded [unmapped] properties).

Table 2 – Summary of Database-Provided Information

Database Name	Search Radius (mile)	Number of Listings
Federal Databases		
NPL (National Priority List)	1	1
Proposed NPL	1	0
NPL LIENS (Federal Superfund Liens)	TP	0
Delisted NPL	1	0
FEDERAL FACILITY (Federal Facility Site Information listing)	0.5	0
SEMS (Superfund Enterprise Management System; formerly Comprehensive Environmental Response Compensation and Liability Information System)	0.5	1
SEMS-ARCHIVE (Superfund Enterprise Management System Archive)	0.5	0
CORRACTS (facilities subject to Corrective action under RCRA)	1	0
RCRA-TSDF (hazardous waste treatment, storage, or disposal facilities)	0.5	0
RCRA-LOG (large quantity generator)	0.25	3

Multiple facilities mapped on the site were listed in the EDR database report. These facilities were evaluated for their potential to impact soil, soil vapor, and/or groundwater at the site. To supplement the information in the EDR report, online databases such as the SWRCB GeoTracker website, Department of Toxic Substances Control's (DTSC's) EnviroStor website, and South Coast Air Quality Management District (SCAQMD) Facility Information Database (FIND) website were reviewed. Information from the EDR database report and supplemental sources is included in the facilities of potential concern summaries below. The following properties/facilities were mapped on the site and represent a potential environmental concern.

Table 3 – On-Site Facilities of Potential Concern

Facility Name / Address	Mapped Location on Site	Database	Summary
Viscic Benedict Gas 1301 5 th Street	Intersection of Mt. Vernon and 5 th St.	EDR Hist Auto	Viscic Benedict Gas at 1301 5 th Street., mapped on the site at the southwest corner of Mt. Vernon Avenue and 5 th Street, was listed on the EDR Hist Auto database in 1936, 1942, 1949, 1969, 1971, 1974-1980, and 1981-1982 as a gasoline service station. This is considered a REC if excavation and earthmoving activities are planned in this area. See Figure 2 for the location of this former facility.
Auto Tune 1230 2 nd Street	Intersection of 2 nd St. and Giovanola Ave.	EDR Hist Auto	Auto Tune at 1230 2 nd Street, mapped on the site at the intersection of 2 nd Street and N. Giovanola Avenue, was listed on the EDR Hist Auto database in 1936, 1942, 1949, 1969, 1971, 1974-1980, and 1981-1982 as a gasoline service station. This is considered a REC if excavation and earthmoving activities are planned in this area. See Figure 2 for the location of this former facility.
Consolidated Freight Waste Inc./ US Xpress Enterprises Corp 1435 4 th St.	South of 4 th Street	HAZNET	Consolidated Freight Waste Inc. was listed as a generator of organic solid waste in 2000. US Xpress Enterprises Corp was listed as a generator of inorganic solid waste in 2004. Both listings may be related to the generation of hazardous waste at the BNSF yard.
Atchison, Topeka & Santa Fe (ATSF) RY/ Southern California Regional Rail Authority/ City & County of San Bernardino / San Bernardino Waste Treatment / Downtown San Bernardino Passenger Rail Project / etc. 1170 3 rd St.	NW of intersection of 3 rd St. and Mt. Vernon Ave.	HIST UST HAZNET NPDES SLIC FINDS RGA LUST ECHO	Multiple entities at 1170 3 rd Street were mapped on-site northwest of the intersection of 3 rd Street and Mt. Vernon Avenue. However, after further review, these mappings may be erroneous, and the facilities are actually east of Mt. Vernon Avenue and off-site. San Bernardino Waste Treatment and ATSF RY were listed on the HIST UST database for four 10,000-gallon waste oil USTs. ATSF was also listed for a cleanup program site involving solvent contamination of groundwater. However, further information was not provided, and the exact location and status of the four 10,000-gallon waste oil USTs is unknown. Multiple entities were listed as generators of hazardous waste, including asbestos-containing materials, organic solids, inorganic solid waste, and PCB-containing waste. SBCTA formerly known as San Bernardino Associated Governments were listed on the National Pollutant Discharge Elimination System (NPDES) database for various projects, including the Downtown San Bernardino Passenger Rail Project, I-15 Base line Road Interchange, and SR-210 Segment 11 Landscape. Based on the information provided, these projects are off-site and not a concern. The groundwater evaluation of solvent contamination in groundwater is further discussed in Section 4.3.
Anita's Mexican Food 1310/1328/1390 4 th St.	North of 4 th Street	HAZNET SWEEPS UST CA FID UST EMI	Anita's Mexican Food (Anita's) at 1390 4th St. was listed as a generator of hazardous waste, including PCB-containing waste, mercury-containing waste, waste oil, asbestos-containing waste, and organic solid waste. Anita's was listed as an active

Table 3 – On-Site Facilities of Potential Concern

Facility Name / Address	Mapped Location on Site	Database	Summary
		San Bern. Co. Permit CHMIRS	facility under the SWEEPS UST and CA FID UST database. Anita's was listed under the Emissions Inventory Database (EMI) in 1990, 1996, and 2012. Anita's was listed under the San Bern. Co. Permit database for a permit as a hazardous material handler, which expired November 30, 2013. Lastly, the address 1390 4th St. was listed under the CHMIRS database for a grease blockage that caused a spill of sewage (approximately 875 gallons were recovered). Anita's Mexican Food is further discussed below.
Walker W C Auto Repair 1304 4 th St.	North of 4 th Street	EDR Hist Auto	The facility Walker W C Auto Repair at 1304 4 th St., mapped on the site near the eastern end of 4 th St., was listed on the EDR Hist Auto database in 1926 and 1930 as an automobile repair facility. It is unknown if this facility was actually on the site or was improperly mapped. Based on this information, this listing is not considered a REC.
Fast Fuel Service Station # 1315 4 th St.	South of 4 th Street	RGA LUST	Pertinent information was not available. The mapping of this facility is considered erroneous and does not represent a REC.
Rustoleum Corporation 1534 4 th St.	North of 4 th Street	HAZNET CHMIRS	Rustoleum Corporation at 1534 4 th St. was listed under the HAZNET database as a generator of 0.2 tons of inorganic solid waste in 2011. The facility address was also listed under the CHMIRS database for a spill of three gallons of paint onto the floor of a trailer. These listings are considered <i>de minimis</i> and do not represent a REC.
Russel CA 1532 4 th St.	North of 4 th Street	EDR Hist Auto	The Russel CA facility at 1532 4 th St., mapped on the site at the northeast corner of 4 th St. and Cabrera Ave., was listed on the EDR Hist Auto database in 1936, 1942, 1949, 1969, 1971, and 1972 as a gasoline service station. Further review of aerials photographs indicates this facility was off-site across the street of Cabrera Avenue, and is unlikely to have significantly impacted the site. This listing therefore does not constitute a REC.
Texaco Food Mart 1440 4 th St.	North of 4 th Street	RGA LUST	Pertinent information was not available. The mapping of this facility is considered erroneous and does not represent a REC.
Ontario Fire Station #5 1530 4 th St.	North of 4 th Street	RGA LUST	Pertinent information was not available. The mapping of this facility is considered erroneous and does not represent a REC.
Unocal #5360 1425 4 th St.	South of 4 th Street	RGA LUST	Pertinent information was not available. The mapping of this facility is considered erroneous and does not represent a REC.
Notes: - Distances and direction provided by EDR - A description of each database is provided in the EDR Report (Appendix C).			

San Bernardino Waste Treatment and ATSF rail yard were listed on the HIST UST database for four 10,000-gallon waste oil USTs. ATSF was also listed for a cleanup program site involving solvent contamination of groundwater, which is further discussed in Section 4.3. After further review on GeoTracker, the location and status of the four 10,000-gallon waste oil USTs were not reported, and it is unknown if they are related to the cleanup program site with solvent impacts. This information is not considered a REC.

Anita's Mexican Food Corp at 1390 West 4th Street was reviewed on the SCAQMD FIND website for more information regarding the UST and EMI listings. Based on a review of the

FIND database, Anita's had a permit to operate a gasoline storage and dispensing station in 1983 and 1990. This information is considered a REC.

Off-site properties/facilities listed in the database report were evaluated as to their potential to impact soil and/or groundwater at the site. To supplement the information in the EDR report, online databases such as the SWRCB GeoTracker website, DTSC EnviroStor website, and SCAQMD FIND website were reviewed. Information from the EDR database report and supplemental sources is included in the facilities of potential concern summaries below. The following properties/facilities were interpreted to represent a potential environmental concern to the site, based on their proximity to the site, the nature of the database on which they are listed, and/or the assumed direction of groundwater flow in the site vicinity (southeast).

Table 4 – Off-Site Facilities of Potential Concern

Facility Name / Address	Distance/ Direction from Site	Database	Summary
Bob & Als Tires / Howard Clifford Gas 106 N. Mt. Vernon	Adjoining southwest (NW corner of Mt. Vernon and Rialto)	EDR Hist Auto	Howard Clifford Gas was listed as a historical gasoline and oil service station in 1936, 1942, and 1949. Based on the age of this listing, this does not constitute a REC to the site. Bob & Als Tires was listed as an auto and home supply store in 1975, 1987, and 1988. Bob & Als Tires was also observed during the site reconnaissance (Section 5.3). This listing does not represent a REC to the site.
BNSF Railway Company/ YRC / Eagle Systems 1535 4 th St.	Adjoining northwest (SW corner of 4 th and Cabrera)	AST HAZNET San Bern. Co. Permit NPDES CHMIRS	BNSF Railway Company / Eagle Systems was listed for ASTs. ASTs were observed at the BNSF rail yard during site reconnaissance for the January 2018 Final Initial Site Assessment (FISA); AST observations are presented in Section 5.4. YRC was listed under the CHMIRS database for various minor spills at the BNSF Intermodal Facility, including low quantities (less than 2 gallons) of paint, diesel fuel, hydraulic fluid, and petroleum oil. This listing does not represent a REC to the site.
Fifth Avenue Service Station 1298 5 th	Adjoining north (intersection of Mt. Vernon and 5 th St.)	EDR Hist Auto	This facility was listed in 1930 as a gasoline and oil service station. Based on the age of this listing, this is not considered a REC to the site.
Gamlowski A M 1286 Rialto Ave	Adjoining southeast (N. of Rialto Ave)	EDR Hist Cleaner	This facility was listed in 1936 as a clothes presser and cleaner. Based on the age and ambiguity of this listing, this is not considered a REC to the site.
Rubio Patsy Mrs 1271 5 th St.	Adjoining northeast (S. of 5 th St.)	EDR Hist Cleaner	This facility was listed in 1949 as a laundry service. Based on the age and ambiguity of this listing, this is not considered a REC to the site.
Atchison, Topeka and Santa Fe/ GW Investigation 1260 3 rd St.	Adjoining east (N. of 3 rd St.)	SWEEPS UST CA FID UST ENF HIST CORTESE	ATSF was listed for several diesel and waste oil USTs, as well as for a groundwater cleanup effort that began in 1988. This listing is related to the groundwater evaluation at the ASTF rail yard, which is further discussed in Section 4.3. The groundwater cleanup effort is considered an HREC.
Santa Fe Railway Company / San Bernardino Powerhouse / BN&SF Railway 470 N. L St.	353 feet north	SWEEPS UST CA FID UST HIST UST SLIC	San Bernardino Powerhouse was listed as having 28 historical USTs of various sizes containing diesel, waste oil, and gasoline. The BN&SF Railway was listed under the SLIC database for hydrocarbon and volatile organic compound (VOC) impacts to soil and groundwater. These impacts are discussed further in Section 4.3. The groundwater cleanup effort is considered an HREC.

Table 4 – Off-Site Facilities of Potential Concern

Facility Name / Address	Distance/ Direction from Site	Database	Summary
ARCO / ARCO AM/PM A&A Holdings 542 N. Mt. Vernon Ave	357 feet north (NW corner of 5 th St and Mt. Vernon)	UST San Bern. Co. Permit	The Arco facility at 542 North Mt. Vernon Ave., north and up-gradient of the site, was listed as containing USTs. Further information, such as contents or capacity, was not noted. The USTs were observed during the site reconnaissance, and are not considered a REC unless excavation and earthmoving activities will encroach on this property.
Lords Dry Cleaners 1061 5 th St.	431 feet ENE (S. of 5 th St.)	EDR Hist Cleaner	Lords Dry Cleaning, east-northeast and up-gradient of the site, was listed as a drycleaner from 1936 to 1990. According to the SCAQMD FINDs website, Lords Dry Cleaners has an inactive permit to operate dry-cleaning equipment that uses tetrachloroethylene (PCE). Violations were not noted. Based on the distance from the site and period of operation, this listing is considered a VEC to the site. See Section 6 for additional details.
C&S Auto Body / Ford Wholesale 1582 4 th St.	445 feet west (N. of 4 th St.)	San Bern. Co. Permit SWEEPS UST CA FID UST	C&S Auto Body was listed as a conditionally exempt small-quantity generator. Ford Wholesale was listed as a hazardous materials handler and containing two USTs with product. Due to the lack of information regarding spills, leaks, or violations, this facility does not represent a REC to the site.
Atchison, Topeka & Santa Fe RY 1170 3 rd St.	533-600 feet east (N. of 3 rd St.)	LUST HIST CORTESE SLIC	ATSF rail yard was listed on the LUST database for chlorinated solvent, gasoline, and diesel contamination to groundwater. The chlorinated solvent impacts to groundwater are further discussed in Section 4.3. The groundwater cleanup effort is considered an HREC.
American Cleaning Works 1052 5 th	547 feet ENE (N. of 5 th St.)	EDR Hist Cleaner	American Cleaning Works at 1052 5 th Street was listed as a historical cleaner in 1922. Based on the age of this listing, this does not constitute a REC.
Nanak Petro / Conoco (Kayo Oil/Econo) / La Placita #2 Proposed Redevelopment 1169 2 nd St.	563 feet east (S. of 2 nd St)	HIST UST SWEEPS UST CA FID UST HIST UST LUST US Brownfields HIST CORTESE EnviroStor	Conoco was listed on the LUST database for a leak discovered in 1985 from a gasoline UST. According to GeoTracker, groundwater monitoring was conducted between 1986 and 1990, during which time free product was discovered in monitoring wells and removed. Chlorinated hydrocarbons were also detected in groundwater sample collected and were suspected to have migrated from the railroad yard. Four USTs were removed from the site on February 27, 1992: three 10,000-gallon unleaded gasoline USTs and one 280-gallon waste oil UST. Later in 1992, four new groundwater wells were installed. Chlorinated hydrocarbons were detected, and in August 1992, a soil vapor extraction system began operating through June 1995. Approximately 5,606 pounds of hydrocarbons were removed. Confirmation borings indicated low residual concentrations of benzene, toluene, ethylbenzene, and xylene (BTEX) and TPH. Case closure was granted on November 7, 1996. The facility was later classified as a brownfield due to proposed redevelopment. Based on the distance, direction, and regulatory status of this facility, this listing does not represent a REC to the site.
Joey's Body Shop 916 6 th St.	722 feet north	LUST	Joey's Body Shop at 916 6 th Street was listed on the LUST database for a leak discovered on April 10, 1989. According to GeoTracker, excavation of contaminated soil was conducted in July 1989, and regulatory closure was granted on September 1, 1989. Information regarding the extent of impacts was not available. Based on the distance and current regulatory status of this facility, this listing is not considered a REC.
Bell Cleaners 631 N. Mt. Vernon Ave	959 feet north	FINDS RCRA-SQG ECHO	The Bell Cleaners facility was listed as a hazardous waste generator. According to the SCAQMD FINDs website, Bell Cleaners has an inactive permit to operate dry-cleaning equipment that used PCE. Violations were not noted. Based on the distance from the site, and lack of violations, this listing is not considered a REC to the site.

Table 4 – Off-Site Facilities of Potential Concern

Facility Name / Address	Distance/ Direction from Site	Database	Summary
Hamby Corp., Valencia Industrial Park 27704 Avenue Scotttrial Park	1,207 feet north	EnviroStor	This facility was listed on the EnviroStor database for a tiered permit. The mapping of this facility is considered erroneous, and is not considered a REC.
Omnitrans 1700 5 th St.	1,396 feet northwest	LUST HIST UST SWEEPS UST CA FID UST EMI NPDES WDS San Bern. Co. Permit HIST CORTESE	The Omnitrans facility at 1700 5 th Street was listed on the LUST database for a leak discovered in 1992. According to GeoTracker, excavation of contaminated soil was conducted in 1993, and regulatory closure was granted on July 13, 1994. Information regarding the extent of impacts was not available. The facility reportedly had 12 USTs containing gasoline, diesel, and oil of various sizes, as well as an industrial wastewater permit and a permit as a hazardous material generator. Based on the distance and current regulatory status of this facility, this listing is not considered a REC.
Newmark Groundwater Contamination Bunker Hill Groundwater Basin	3,500 feet north	NPL US Eng. Controls US Inst. Controls ROD PRP SEMS	The Newmark Groundwater Contamination property underlies approximately eight square miles of land in the northwestern and west-central portions of San Bernardino, California, which have been developed for light industry and residential use. The contamination consists of two contaminated groundwater plumes at the base of the San Bernardino Mountains: the Newmark Plume area extends for 5 miles on the eastern side of Shandin Hills, while the 4-mile long Muscoy Plume area lies to the west of Shandin Hills. Detection of the contamination occurred in 1980 with the institution of a water supply monitoring program, although the suspected disposal source may have occurred as early as the 1940s. The contaminated groundwater is currently being treated using groundwater extraction (pumping) and treatment consisting of liquid phase granular activated carbon (LPGAC) groundwater treatment technology. These contaminated plumes do not extend beneath the site and are not considered a REC to the subject site at this time.
Notes: - Distances and direction provided by EDR - A description of each database is provided in the EDR Report (Appendix C).			

It is our opinion that there is a low likelihood that the remaining listings for off-site properties listed in the database report represent a REC to the site at the current time. This opinion is based on one or more of the following factors:

- The nature of the database(s) on which the property is listed, and/or because the property was not listed on a database that reports unauthorized releases of hazardous substances;
- Reported regulatory agency status (i.e., case closed);
- Reported nature of the case (i.e., soil contamination only);
- Reported distance of the property from the site; and/or
- Location of the property in relation to the site with respect to topography or expected groundwater flow direction (southeast).

4.1.2 Non-Geocoded (Unmapped) Listings

Six unmapped properties under seven listings, due to poor or inadequate address information, were in the EDR report. Unmapped properties are shown by EDR as Orphan Sites. Based on the general location information provided for these properties, the types of databases on which these properties were listed, and/or the approximate distance of these facilities from the site, Ninyo & Moore concluded it is unlikely the environmental integrity of the site has been impacted by these unmapped properties and are not considered a REC or indicator of a REC for the site.

4.2 HISTORICAL USE INFORMATION

A historical record search was conducted for both the site and surrounding areas. This review included one or more of the following sources that were found to be both reasonably ascertainable and useful for the purposes of this supplemental ISA: historical aerial photographs, historical fire insurance maps, and topographic maps. The following table lists the historical data types reviewed for this supplemental ISA, their source, their respective dates, and data failures encountered during our review, if any.

Table 5 – Summary of Historical Records Reviewed			
Data Type	Source	Source Dates	Data Limitation
Historical Aerial Photographs	Environmental Data Resources, Inc. Google Earth	1930-2016	None
Sanborn Fire Insurance Maps	Environmental Data Resources, Inc.	1906-1969	None
Topographic Map	Environmental Data Resources, Inc., USGS 7.5-Minute Topographic Quadrangle Map Series, San Bernardino North and South, California	1896-2012	None
Note: USGS – United States Geological Survey			

Although one or more of the sources listed above provided limited information with regards to the historical use of the site, the information gathered from the sources reviewed as a whole is adequate to develop a history of the previous uses of the site and the surrounding area in accordance with Section 8.3 of ASTM Practice E 1527-13.

4.2.1 Historical Aerial Photographs

Historical aerial photographs were provided by EDR and reviewed online using Google Earth for select years from 1930 through 2016. A listing of the photographs reviewed and summary of notable observations from the photograph review are provided in the table below. EDR-provided aerial photographs are included in Appendix D.

Table 6 – Aerial Photographs Summary

Date	Source	Summary
1930	A	The site was occupied primarily by the former ATSF (current BNSF) railroad yard, which consisted of the Mt. Vernon Avenue Bridge, railroad tracks, a train roundhouse, and the former ATSF diesel shop buildings east of the bridge. Two large ASTs were present north of the shoofly and west of the bridge. The Santa Fe Depot Station (SFDS; current Amtrak/Metrolink station) was south of the shoofly, east of the bridge, and north of 3 rd Street. Areas around the ATSF (current BNSF) yard to the north, east, and south were primarily residential properties, including the onsite area between 4 th Street and Kingman Street. Lytle Creek Wash was present to the west.
1938	A	The Mt. Vernon Avenue Bridge was widened. An additional roadway was constructed that connected the southern end of the bridge to 3 rd and 2 nd Streets.
1949 1953 1959	A	Previously vacant land was developed to the south and west of the SFDS with buildings, parking lots, and storage areas. This included a storage areas/maintenance yard onsite west of the bridge.
1966 1968	A	Portions of the train roundhouse were removed.
1975 1985 1989	A	The two large ASTs located north of the shoofly and west of the bridge were removed.
1994	A	Railroad tracks in the vicinity of the shoofly east of the bridge were removed. Several buildings and the train roundhouse were removed from the ATSF (current BNSF) yard north of the shoofly and east of the Mount Vernon Avenue Bridge.
2005 2006	A	The former diesel shop buildings were removed. The northeastern portion of the BNSF yard was converted into parking lots for trailers with an office and maintenance building. A building was developed adjoining to the east of the bridge and north of the shoofly (former area of train roundhouse). The area west of the bridge in the vicinity of the shoofly was developed with a driveway. The vicinity around the BNSF yard was primarily residential with some retail and commercial buildings. New parking lots were developed southwest of the BNSF yard.
2009 2010 2012 2016	A, B	The site was similar to that observed during the site reconnaissance. The roadway at the intersection of Mt. Vernon Avenue and 2 nd and 3 rd Streets was altered.
Sources: A – EDR B – Google Earth		

Based on our aerial photograph review, the site was developed with the Mt. Vernon Avenue Bridge prior to 1930. Between 1930 and 1938, the bridge was widened. The site in the vicinity of the bridge was used as the former ATSF (current BNSF) railroad yard from 1930 to the present, which included the train roundhouse, diesel fueling shops, and two large ASTs. The ASTs were present on the site between 1930 and 1968; portions of the train roundhouse and diesel fueling shops were present on the site in the proposed shoofly area between 1930 and 1989. The vicinity of the BNSF railroad yard to the north, east, and south consist primarily of residential properties with some commercial properties. The Santa Fe Depot Station (SFDS), which is offsite to the east, was present as early as 1930. A maintenance yard west of the bridge and north of 3rd Street was present as early as 1953.

4.2.2 Sanborn Fire Insurance Rate Maps

Sanborn Fire Insurance maps for selected years between 1906 and 1969 were provided by EDR. A summary of the Sanborn Fire Insurance maps is presented in the following table.

Table 7 – Sanborn® Fire Insurance Maps Summary

Date	Summary
1896	The eastern portion of the shoofly was depicted within a residential neighborhood. Portions of railroad tracks and the label “R.R Reserve” and “Santa Fe R.R. Depot” were also depicted near the site.
1906	The northern portion of the site (between 4 th Street and 5 th Street) was depicted as a residential area. The eastern portion of the site was depicted with railroad tracks. The ATSF Rail Road Passenger Depot (current Santa Fe Depot) was depicted to the south of the site. The site vicinity to the north and east was depicted as primarily residential and vacant land. Much of the southern and western portions of the site were unmapped.
1950	The northern portion of the shoofly west of the bridge was depicted in the 1950 to 1954 Sanborn Maps and consisted of the ATSF yard, including two 55,000-gallon fuel oil ASTs and other fueling-related tanks and equipment in the present day fueling area. The site north of the shoofly and east of Mt. Vernon Avenue was occupied with the power house, blacksmith shop, crane house, coal shed, and machine shop. Areas of the ATSF yard adjoining the site east of the bridge included a pipe and tin shop, boiler shop, fuel shop, planning mill, and an area used to repair refrigerated train cars. The area of the site between 4 th Street and Kingman Street west of Mt. Vernon Avenue was depicted as primarily residential and vacant land. A dry cleaner (Lords Dry Cleaners at 1061 West 5 th Street), an ATSF emergency hospital, auto parking lots, restaurants, and residential structures were developed north of the ATSF rail yard. Gasoline and oil service stations were depicted at the northwestern and southwestern corner of 5 th Street and Mt. Vernon Avenue (current day Arco and pawn shop, respectively). The site vicinity to the north and the east continued to be primarily residential in nature.
1951	
1953	
1954	
1956	
1957	
1958	
1959	A restaurant and a tortilla factory were developed north of 4 th Street on the site. The rest of the Sanborn map coverage had similar conditions to those noted in the 1957 Sanborn map.
1961	
1963	
1969	

The Sanborn maps show the site vicinity as being primarily residential properties from 1906 through 1969, with some notable adjoining commercial properties, including a dry cleaner, oil and gasoline service stations, and a tortilla factory (Former Anita’s Mexican Food). The northern portion of the ATSF rail yard was depicted with multiple maintenance buildings and fuel tanks on and adjoining the site between 1950 and 1969. The presence of the historical 55,000-gallon fuel tanks at the site is not considered a REC to the site. A copy of the Sanborn Fire Insurance Rate Map Report is provided in Appendix D.

4.2.3 Historical Topographic Maps

Historical topographic maps dated 1896, 1898, 1901, 1938, 1942, 1943, 1954 photorevised from 1952, 1967 photorevised from 1966, 1973, 1975, 1980 photorevised from 1978, and 2012 were provided by EDR. Based on our topographic maps review, an ATSF railroad was developed that traversed the southern portion of the site by 1896. By 1938, Mt. Vernon Bridge was developed over numerous railroad tracks. On the site were portions of the ATSF facility that included two ASTs (west of bridge) and a train roundhouse (east of bridge). Portions of the diesel shop buildings were present on the shoofly east of the bridge (southern boundary of the diesel shops) and North L Street (northern boundary of the diesel shops). The 1943 topographic map displays State Route 66 traversing along the present day 4th street in the northwest portion of the site. Additionally, State Route 18 was depicted traversing the southeast corner of the site at the present day 2nd Street. State Route 18 was depicted as a

railroad track in 1942 and 1943, but by 1954 was a four-lane road. The former ATSF Railroad Yard and current BNSF Railroad Yard were developed on and adjoining to the site from 1938 to the present. Lytle Creek Wash ran approximately one mile west of the site for all topographic maps reviewed. Copies of the historical topographic maps are included in Appendix D. Because the site was on and adjoining to multiple roadways, including State Route 66, and the ATSF/BNSF railroad facility prior to 1992, when leaded gasoline was utilized, the potential presence of aerially-deposited lead (ADL) in shallow unpaved soil along Mt. Vernon Avenue, 4th Street, and railroad tracks at the BNSF Intermodal Facility at the site represents a REC.

4.3 Online Regulatory Databases

Online regulatory databases were reviewed by Ninyo & Moore to supplement the environmental database search conducted by EDR. The following is a summary of pertinent information.

Table 8 – Online Regulatory Databases	
Online Database/Website	Findings
California Department of Toxic Substances Control (DTSC) EnviroStor	The site was not listed. See Section 4.1.1 for discussion related to adjoining facilities.
SWRCB GeoTracker	The BNSF facility was listed under the address 470 N. L Street. See below for a discussion related to the listing of the BNSF facility at 470 N. L Street. See Section 4.1.1 for discussion related to adjoining facilities of potential concern.
California Department of Resources Recycling and Recovery (CalRecycle) Solid Waste Information System	Neither the site nor properties within 1,000 feet were listed.
United States Pipeline and Hazardous Materials Safety Administration, National Pipeline Mapping System Map Viewer	Pipelines were not depicted on or adjoining to the site.
US Army Corps of Engineers, Formerly Used Defense Sites (FUDS), Geographic Information System	FUDS listings were not depicted within 1,000 feet of the site.
State of California Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR) Online Mapping System	The site does not lie within the administrative boundaries of an oil field. Oil wells were not observed within 1-mile radius of the site.
SCAQMD FINDS	See Section 4.1.1 for discussion related to onsite and adjoining facilities of potential concern to the site.

GeoTracker – 470 North L Street

A Cleanup and Abatement Order No. (CAO) 88-80 was issued to ATSF by the Santa Ana Regional Water Quality Control Board (RWQCB) on July 12, 1988 in response to fuel oil being discovered by City of San Bernardino Water Department staff in an on-site monitoring well in June 1984. During follow-up inspections by the RWQCB, their staff noted various solvents used at the facility were improperly handled, stored, and disposed by ATSF employees. Testing of on- and off-site monitoring wells showed trichloroethylene (TCE) and PCE in the on-site wells, whereas off-site

wells did not show any of the contaminants. In 1984, wastewater being discharged from the ATSF (current BNSF) facility was tested and found to have detectable VOC concentrations. As a result of ATSF's slow response to RWQCB's requests to abate the effects resulting from improper handling and disposing of solvents on the site, the CAO was issued. Among other items required by the CAO, deadlines were set for ATSF to submit a workplan for installing additional wells and continued monitoring, to prepare a sampling and analysis plan to characterize groundwater, and to submit a work plan to install a soil-vapor extraction system (SVE).

Work plans, pilot test reports, applications, and correspondence related to the installation of a Vapor Extraction/Vapor Treatment System (VES/VTs) on the northeastern portion of the BNSF property (diesel shops area) between June 1995 and February 2006 were reviewed. The VES/VTs was installed to remediate halogenated VOCs (HVOcs), primarily PCE and TCE. An NFA letter by the RWQCB was issued on February 21, 2006 for the soil and groundwater at the site. The RWQCB issued a closure letter for the VES/VTs system at the site on September 9, 2008.

An NFA letter for the ex-situ remediation of eight areas of the BNSF Rail Yard was issued on March 3, 2004. The areas where excavation had occurred, which were previously impacted by total petroleum hydrocarbons (TPH), heavy metals, or brine, included the new and former Industrial Wastewater Treatment Plant, former Brine Ponds, Mt. Vernon Avenue area, former Car Shops, former Diesel Shops, and former Union Pacific Railroad Facility. The NFA letter was granted because concentrations of residual TPH and metals were considered by the RWQCB to be too low to be a threat to human health or the environment, and could not impact groundwater. The excavation areas are considered HRECs.

Eleven phases of subsurface evaluation and groundwater monitoring well installation were conducted at the BNSF property, in accordance with the requirements of the CAO. In 2010, regional groundwater below the site ranged from approximately 145 feet to 155 feet bgs. Discontinuous zones of perched groundwater have been encountered at varying depths beneath the site as a result of the long-term decline in elevation of the regional saturated zone during BNSF's 19 years of monitoring activities.

A recent groundwater monitoring report (November 2010) for this property summarized the groundwater quality conditions based on long-term analytical trends and constituent concentrations in wells sampled between March and September 2010. Analytical trends for wells MW-41, MW-59, and MW-60, located in the vicinity of the former Diesel Shops, showed significant long-term reductions in HVOC concentrations. In MW-47, also within the Diesel Shops source

area, total concentrations of PCE, TCE, and cis-1-2-dichloroethene (DCE) decreased from approximately 200 micrograms per liter (µg/l) in January 1998 and March 2001, to less than 50 µg/l in December 2002, after which the wells became dry. During each of its sampling events, MW-72 showed individual concentrations of PCE, TCE, and cis-1,2-DCE below respective maximum contaminant levels (MCLs). Down-gradient well MW-73 on the property, and down-gradient wells MW-74, MW-75, and MW 76 off this property were installed in 2005 and monitored for approximately two years. The individual concentrations of PCE and TCE decreased from slightly above MCLs to levels below MCLs, and concentrations of cis-1,2-DCE decreased from 33 µg/l to below or slightly above its MCL.

Considering the low concentrations of dissolved HVOCs in regional groundwater below the BNSF property during recent years of monitoring, the presence of natural attenuation processes, the depth to groundwater exceeding 140 feet bgs, and a defined down-gradient extent of groundwater with HVOC levels below MCLs, the RWQCB did not consider the residual low concentrations of HVOCs to be a threat to human health or the beneficial uses of the Bunker Hill-A Groundwater Management Zone. An NFA letter was issued to the former BNSF Railway Company Railyard Intermodal Facility on April 12, 2011.

Based on the remediation activities that have been conducted and current regulatory status (NFA) of the site, it is unlikely that the groundwater remediation activities reviewed continue to impact the environmental integrity of the site, and is considered an HREC.

4.4 Previous Reports

The following reports were available for review.

4.4.1 Ninyo & Moore, 2004, Initial Site Assessment (ISA) at the Mt. Vernon Avenue Bridge and Proposed Shoofly Track Area in San Bernardino, California, dated August.

The 2004 ISA findings described a chlorinated solvent plume in groundwater which had resulted from historic releases at the BNSF yard that was migrating southeast towards the eastern portion of the shoofly. The report stated that TPH- and metals-impacted soil beneath the Mt. Vernon Avenue Bridge was excavated and/or remediated in place and that regulatory closure was granted by the RWQCB on March 3, 2004. Additionally, two gasoline stations were located within the immediate vicinity of the Mt. Vernon Avenue Bridge: on the northeast corner of 5th Street and Mt. Vernon Avenue; and on the northwest corner of 2nd Street and Mt. Vernon Avenue. Information on the regulatory status of the gasoline stations was not included.

In the 2004 ISA report, Ninyo & Moore reviewed an ISA prepared by Parsons Brinckerhoff Quade & Douglas, Inc. (Parsons). The text of the Parsons report concluded that “potential contaminant sources have been identified that may result in adverse impacts associated with the proposed project.” However, the text did not specify what those sources were. In the ISA Checklist prepared by Parsons, Parsons recommended that “investigations of the rail yard should be completed to detect any contamination due to rail operations.” The Parsons report provided no specific information regarding hazardous materials releases at the BNSF yard.

4.4.2 Ninyo & Moore, 2010, Revised ISA at the Mt. Vernon Avenue Bridge and Proposed Shoofly Track Area in San Bernardino, California, dated January 13.

The following summary of findings, opinions, and conclusions associated with the 2010 ISA were reported:

Mt. Vernon Avenue Bridge

- Soil underlying the bridge within BNSF property had been impacted with petroleum hydrocarbons and metals from historical railway operations. Impacted soil underlying portions of the northern end of the bridge was excavated. Regulatory closure for impacted soil was granted in May 2003. Residual herbicides suspected to be used along the railroad tracks may be present in soil beneath the bridge. Ninyo & Moore recommended the sampling and analysis of soil (and groundwater if encountered) beneath the bridge within the proposed demolition and construction zones for chemicals of concern (COCs) including petroleum hydrocarbons, metals, VOCs, PCBs, semi-VOCs (SVOCs), and chlorinated herbicides.
- The bridge was approximately 1,000 feet west of a chlorinated solvent plume in groundwater which had resulted from historic releases at the BNSF/ATSF property. The extent of the groundwater contamination was under investigation under the oversight of the RWQCB at the time.
- Two former gasoline stations were located within the immediate vicinity of the bridge: one on the northwest corner of 5th Street and Mt. Vernon Avenue; and the other on the northwest corner of 2nd Street and Mt. Vernon Avenue. If the proposed demolition construction activities were to impact soil beneath the two former gasoline stations, Ninyo & Moore recommended the collection and analysis of soil samples for petroleum hydrocarbons and VOCs during the design phase.

Proposed Shoofly Track Area

- The proposed shoofly area east of the bridge was occupied by a roundhouse and diesel and car shops (maintenance) which extended onto the proposed shoofly track area east of Mt. Vernon Avenue. The roundhouse and the diesel and car shops were removed in the early 1990s. Ninyo & Moore recommended the sampling and analysis of soil (and groundwater if encountered) beneath the proposed shoofly track area for petroleum hydrocarbons, metals, VOCs, PCBs, SVOCs, and chlorinated herbicides.
- A VES/VTs was installed to remediate solvent contaminated soil in the immediate vicinity of the former diesel shops in the proposed shoofly track area on BNSF property. A NFA was issued for solvent contaminated soil by the RWQCB, and a closure letter was issued for the

BNSF property on September 9, 2008. The groundwater and extent of contamination was currently under investigation under the oversight of the RWQCB.

- A fueling area, wash pad and an oil/water separator system were adjoining and north of the proposed shoofly track area and west of the bridge. The fueling area contained a 6,000-gallon diesel AST, a 2,000-gallon gasoline AST, two 240-gallon diesel ASTs, two 240-gallon unleaded fuel ASTs, seventeen 55-gallon drums of used filters and motor oil, two 240-gallon ASTs with motor oil, one 240 gallon AST with used motor oil, and a small shed with four 55 gallon drums containing new and used motor oil. Surface staining was observed around the stored petroleum products.
- The wastewater/oil-and-water separator system located on BNSF property north of the proposed shoofly area and west of the Mt. Vernon Avenue Bridge consisted of a below grade oil/water separator and an oil recovery AST. Wash water from the wash pads drained into the below grade oil/water separator. The recovered oil was pumped back to an oil recovery AST.
- Soil on BNSF property in the vicinity of the proposed shoofly track area had been impacted with petroleum hydrocarbons and metals from historical railway operations. Impacted soil, west of the bridge, was excavated between October 1988 and May 2003. Regulatory closure of the impacted soil was granted on May 12, 2003.
- Based on the historic use as a rail yard and the common use of herbicides on railroad tracks, Ninyo & Moore stated that residual herbicides may be present in soil beneath the asphalt along the proposed shoofly track area.
- The eastern portion of the proposed shoofly track area was in the immediate vicinity of a chlorinated solvent plume in groundwater which has resulted from historic releases at the BNSF/ATSF property. The extent of the groundwater contamination was under investigation under the oversight of the RWQCB during the time of the report.

4.4.3 Ninyo & Moore, 2013, Limited Subsurface Investigation (LSI) at the Mt. Vernon Avenue Overhead in San Bernardino, California, dated December 20.

On behalf of the City of San Bernardino, Ninyo & Moore advanced nine hand-auger soil borings (B1 through B9) and collected select soil samples from the shoofly. Ninyo & Moore also advanced six direct-push borings (DP1 through DP5, and DP4A) and collected select soil and groundwater samples from the BNSF and SBCTA properties on the bridge replacement alignment.

Several VOCs, SVOCs, TPHs, and Title 22 Metals exceeded regulatory screening levels in soil samples analyzed. Chlorinated herbicides (with the exception of one minor detection of pentachlorophenol) and organochlorine pesticides (OCPs) were not detected in soil samples analyzed. Concentrations of VOCs and some Title 22 Metals in groundwater exceeded the California Environmental Protection Agency and/or United States Environmental Protection Agency (EPA) MCLs at the site. The following provides a summary of contaminants of concern encountered for individual borings:

- **DP1 (Mt. Vernon Bridge SBCTA Property)** – reported concentration of the SVOC Phenol above reuse requirements at 35 feet bgs.
- **DP2 (Mt. Vernon Bridge)** – reported concentrations of VOCs in groundwater above the MCLs, including cis-1,2-DCE (370 µg/l), PCE (5.5 µg/l), trans-1,2-DCE (14 µg/l), TCE (180 µg/l), and vinyl chloride (11 µg/l). Some metals were detected in groundwater above the MCLs, including arsenic (0.022 milligrams per liter [mg/l]), chromium (0.25 mg/l), lead (0.029 mg/l), and nickel (0.13 mg/l).
- **DP3 (Mt. Vernon Bridge)** – reported concentrations of TPH in soil at 16,900; 12,200; and 12,500 milligrams per kilogram (mg/kg) between surface and 5 feet bgs, respectively. TPH as diesel was detected above the EPA Regional Screening Level (RSL) for medium range aromatic hydrocarbons in industrial soil. The metal chromium (0.058 mg/l) was detected in groundwater above the MCL.
- **DP4 (Mt. Vernon Bridge)** – reported concentrations of TPH in soil at 1,567 and 10,900 mg/kg between surface and 3 feet bgs, respectively. TPH as diesel was detected above the EPA RSL for medium range aromatic hydrocarbons in industrial soil. Lead in soil was reported at 120 and 100 mg/kg at surface and 3 feet bgs, respectively. This did not exceed the DTSC screening level for lead in industrial soil.
- **DP4A (Mt. Vernon Bridge)** – reported concentrations of TPH in soil at 16,200; 11,000; and 660 mg/kg between surface and 5 feet bgs, respectively. TPH as diesel was detected above the EPA RSL for medium range aromatic hydrocarbons in industrial soil. Some metals were detected in groundwater above the MCLs, including arsenic (0.027 mg/l), beryllium (0.0045 mg/l), chromium (0.18 mg/l), lead (0.37 mg/l), and nickel (0.15 mg/l).
- **DP5 (Mt. Vernon Bridge)** – reported concentration of TPH in soil at 8,180 mg/kg at surface. TPH as diesel was not detected above the applicable EPA RSL.
- **B3 (Shoofly west of Bridge)** – reported concentrations of TPH in soil at 10,900 and 13,600 mg/kg from 2 to 3 feet bgs, respectively. TPH as diesel was detected above the EPA RSL for medium range aromatic hydrocarbons in industrial soil. Lead in soil was reported at 110 and 89 mg/kg at 2 and 3 feet bgs, respectively (below DTSC screening level), but exceeded the lead Soluble Threshold Limit Concentration (STLC) at 6.0 and 5.7 mg/l from 2 and 3 feet, respectively. This means treatment of the soil as non-Resource Conservation and Recovery Act (RCRA) hazardous soil. A number of SVOCs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, and phenanthrene) were detected in soil above reuse requirements.
- **B5 (Shoofly east of Bridge near former diesel shops)** – reported concentrations of lead in soil at 210 and 330 mg/kg from 1 to 3 feet bgs, respectively (above the DTSC screening level for industrial soil), and exceeded the STLC limit at 7.2 and 28 mg/l from 1 and 3 feet bgs, respectively. The 3-foot sample also exceeded the Toxicity Characteristic Leaching Procedure (TCLP) limit at 20 mg/l. This means treatment of the soil as RCRA-hazardous soil. A number of SVOCs (benzo(a)anthracene, benzo(b)fluoranthene, and phenanthrene) were detected in soil above reuse requirements.
- **B6 (Shoofly east of Bridge)** – reported concentrations of lead in soil at 110 and 78 mg/kg from 1 to 3 feet bgs, respectively (below the DTSC screening level), but exceeded the STLC limit at 7.4 and 9.6 mg/l from 1 and 3 feet bgs, respectively. This means treatment of the soil as non-RCRA hazardous soil. PCE was detected in soil at concentrations of 23 and 39 mg/kg from 1 and 3 feet bgs, respectively. PCE was detected above the DTSC screening level for industrial soil.

- **B7 (Shoofly east of Bridge)** – reported concentrations of lead in soil at 91, 150, and 210 mg/kg from 1, 3, and 4 feet bgs, respectively (below the DTSC screening level), but exceeded the STLC limit at 5.6, 7.9, and 12 mg/l from 1, 3, and 4 feet bgs, respectively. This means treatment of the soil as non-RCRA hazardous soil.

Based on the analytical results, Ninyo & Moore concluded that soil disturbed during earthmoving activities may be classified as a hazardous waste on the shoofly alignment, and special considerations may be necessary for handling some excavated soil for the project. Constituents in soil at the site represented a potential threat to the health of site workers performing earthwork activities. Risks associated with these constituents would need to be mitigated for both construction workers and the community. Four types of soil were expected to require management during earthmoving activities associated with this site: RCRA-Hazardous Waste, California-Hazardous Waste, Impacted Non-Hazardous Waste, and Soil Acceptable for Reuse. Ninyo & Moore provided recommendations for the protection of worker health and safety as well as for proper waste handling, disposal, and reuse of soil disturbed at the site.

4.4.4 Ninyo & Moore, 2017, Supplemental Initial Site Assessment (ISA), Mt. Vernon Avenue OH Bridge Over BNSF Rail Yard in San Bernardino, California, dated September 21.

Ninyo & Moore prepared a Supplemental ISA for the Mt. Vernon Avenue Bridge Project dated September 21, 2017. The project area, a primarily residential area between 4th Street and Kingman Street, bounded by Mt. Vernon Avenue to the east and Cabrera Avenue to the west, was evaluated for RECs. The area comprises the northwestern portion of the current site. The following RECs were reported during this supplemental ISA:

- Railroad operations were present to the south and east of the site as early as 1896, continued through the time of the report. Large ASTs were present in the railroad yard immediately adjacent to the south between 1938 and 1968, which was considered a REC.
- Based on information gathered from Ninyo & Moore's ISA of the Mt. Vernon Avenue Bridge and Shoofly Project in 2010, the BNSF property was potentially impacted with petroleum hydrocarbons, metals, herbicides, and a chlorinated solvent groundwater plume. A fueling station was also present adjacent to the southeast of the site, on which staining was observed. The presence of the fueling station and associated staining adjacent to the southeast of the site represented a REC.
- The roads Mt. Vernon Avenue, 4th Street, Cabrera Avenue, and Kingman Street were present in their current location as early as 1938. State Route 66 traversed along the present day 4th Street, which comprises the southern portion of the site. Because the site was adjacent to multiple roadways, including State Route 66, and the BNSF railroad facility to the south and east prior to 1992, when leaded gasoline was utilized, the potential presence of ADL in shallow unpaved soil at the site represented a REC.

- Anita's Mexican Food Corp at 1390 4th Street was listed on historical UST databases. Additionally, Anita's was issued a SCAQMD permit to operate a gasoline storage and dispensing station in 1983 and 1990. Based on the presence of a gasoline UST on the site, and lack of information regarding its removal, this information was considered a REC.
- A concrete vault, possibly an oil-water separator, was observed on vacant land north of 4th Street. The oil-water separator was probably used as a wastewater treatment system for the old restaurant, Anita's Mexican Foods Corp at 1390 West 4th Street. This was considered a REC.
- Two on-site historical auto repair facilities were listed on the EDR Hist Auto database (Walker W C Auto Repair at 1304 4th Street and C&S Automotive at 1452 4th Street). These were considered RECs.
- A stockpile of crushed concrete was observed at the southern portion of the site. The stockpile was approximately 6,000 cubic yards in volume. Based on correspondence with the client, the stockpile was related to construction work in the rail yard. Beginning on August 18, 2017 the stockpile was loaded onto trailers and hauled off site. Additional information from BNSF on the stockpile was pending at the time of the report. The presence of undocumented fill on the site was a REC.
- Based on the historical research and results of the vapor encroachment screening matrix (VESM), a vapor encroachment condition (VEC) could not be ruled out beneath the site.

The potential presence of ADL in shallow, unpaved soil along Mt. Vernon Avenue, 4th Street, and railroad tracks in the BNSF Intermodal Facility represents a REC to the site. The presence of a historical UST and oil-water separator at Anita's Mexican Food Corp., is considered a REC to the site. Based on additional information gathered during this current ISA, the following changes in regards to some of the reported RECs from the September 2017 ISA include:

- The presence of ASTs (historical and current fueling area) on the BNSF Intermodal Facility does not represent a REC to the site, unless excavation and earthmoving activities are planned in this area.
- During the site reconnaissance for the September 2017 ISA, a stockpile of crushed concrete was observed on vacant land. This was classified as "undocumented fill" and considered a REC. During the site reconnaissance on February 1, 2018, the stockpile of crushed concrete was not observed. Therefore, this is no longer considered a REC.
- Two on-site historical auto repair facilities were listed on the EDR Hist Auto database, and were considered RECs in the September 2017 ISA. However, based on new information gathered during the preparation of this current ISA, the mapping of these historical facilities was erroneous. Therefore, this is no longer considered a REC.

4.4.5 Ninyo & Moore, 2018, Final Supplemental Initial Site Assessment (FISA), Mt. Vernon Avenue Bridge Project, City of San Bernardino, California, dated January 8.

Ninyo & Moore prepared a FISA for the Mt. Vernon Avenue Bridge Project dated January 8, 2018. The FISA was prepared as a supplemental version to the 2010 ISA conducted by Ninyo & Moore (Section 4.4.2), with the intent to re-evaluate the findings of the past ISA and discuss how environmental conditions have changed since that time. The site area included the bridge and its approaches between 2nd Street and 5th Street, as well as the proposed shoofly traversing east-west along the northern portion of the BNSF Intermodal Facility. The following conclusions were reported:

- Records referring to soil in the vicinity of the bridge impacted with “long-chain hydrocarbons” and lead were found from files provided by the RWQCB. Records indicated that areas of soil on both sides of the northern end of the bridge were excavated up to a depth of 60 feet bgs between May and July 1994 and to depths ranging from 16 to 25 feet bgs between October 1994 and February 1995. Approximately 46,300 cubic yards of TPH-impacted soils were excavated and removed from the site from excavations areas “MV1, MV4, MV5, and MV6.” On February 17, 1995, the RWQCB authorized the backfill of excavations after confirmation sample results were reviewed and confirmed to contain TPH at acceptable levels. Soils located underneath the bridge could not be excavated, due to accessibility issues. The potential presence of TPH-impacted soils beneath the northern portion of the bridge was evaluated during Ninyo & Moore’s 2013 LSI. The presence of TPH at elevated concentrations was reported in borings DP-3 and DP-4A, which are underneath the northern section of the bridge. The presence of TPH-impacted soil underneath the northern portion of the bridge was considered a REC.
- Elevated concentrations of constituents of concern were reported in samples collected for the shoofly, SBCTA, and BNSF properties during a LSI conducted by Ninyo & Moore in 2013 (Section 4.4.3); namely lead which was found at concentrations indicating hazardous characterization. On the shoofly alignment, Ninyo & Moore indicated some of the soil disturbed during earthmoving activities may be classified as a hazardous waste with respect to lead. Therefore, special considerations may be necessary for handling some excavated soil for the project. This was considered a REC.
- Based on the historic use as a rail yard and the common use of herbicides on railroad tracks, Ninyo & Moore concluded residual herbicides may be present in soil beneath the asphalt along the proposed shoofly track area and beneath the bridge. However, chlorinated herbicides (with the exception of one minor detection of pentachlorophenol) and OCPs were not detected in soil samples along the proposed shoofly track area or beneath the bridge during Ninyo & Moore’s 2013 LSI. Therefore, the presence of chlorinated herbicides was not considered a REC to the site.
- Two gasoline stations were located within the immediate vicinity of the bridge: one on the northwest corner of 5th Street and Mt. Vernon Avenue (currently an Arco station); and the other on the northwest corner of 2nd Street and Mt. Vernon Avenue (former gasoline station). Spills or records of release were not found for these facilities. The presence of these gasoline stations were considered a REC if demolition of the Mt. Vernon Avenue Bridge and related excavation work would encroach onto these properties.

- A VES/VTs was installed to remediate solvent contaminated soil in the immediate vicinity of the former diesel shops in the proposed shoofly track area on BNSF property. A NFA was issued for the solvent contaminated soil and groundwater by the RWQCB and a closure letter was issued for the BNSF property in 2006 and 2011. This was considered an HREC.
- A fueling area, an oil/water separator system, and two wash pads were adjacent and north of the proposed shoofly track area and west of the bridge. The fueling area contained a 6,000-gallon diesel AST, a 2,000-gallon gasoline AST, two 240-gallon diesel ASTs, two 240-gallon unleaded fuel ASTs, twenty 55-gallon drums (empty, used filters, antifreeze, motor oil, parts cleaner, hydraulic oil, aerosols) on secondary containment, two 330-gallon ASTs with diesel exhaust fluid, five 300-gallon ASTs (hydraulic fluid, diesel oil, motor oil, transmission oil, detergent), and a small storage shed containing a parts cleaner, two fire closets (aerosols, gasoline, lube oil, paints), and four 55-gallon drums of clean and used motor oil. Surface staining was observed on concrete around the stored petroleum products. This was considered a *de minimis* condition, and was not considered a REC to the site.
- The wastewater/oil-and-water separator system located on BNSF property north of the proposed shoofly area and west of the Mt. Vernon Avenue Bridge consisted of a below grade oil/water separator and an oil recovery AST. Wash water from the wash pads drained into the below grade oil/water separator. The recovered oil was pumped back to an oil recovery AST. This was not considered a REC to the site.
- Soil on BNSF property in the vicinity of the proposed shoofly track area had been impacted with petroleum hydrocarbons and metals from historical railway operations. Portions of impacted soil had been excavated between October 1988 and May 2003. Regulatory closure of the excavation of impacted soil was granted on May 12, 2003 by the RWQCB. This was considered an HREC.
- Based on the results of the VESM, a VEC could not be ruled out beneath the site, and was considered a REC.

5 SITE RECONNAISSANCE

The objective of the site reconnaissance was to obtain information indicating the potential for RECs in connection with the site. Mr. Dennis Fee conducted the reconnaissance on February 1, 2018. Areas of the site previously observed during the September 2017 and January 2018 ISAs were not observed on February 1, 2018, unless otherwise noted. Results of the site reconnaissance from the September 2017 and January 2018 ISAs have been incorporated into following sections as appropriate. A site plan is provided as Figure 2 and photographic documentation is provided in Appendix B.

5.1 Methodology and Limiting Conditions

The site reconnaissance consisted of walking along public sidewalks (for viewing of the site and adjoining/nearby properties). Limiting conditions were not encountered.

5.2 General Site Setting

At the time of the reconnaissance, the following general site settings were observed:

- The site includes approximately 2,700 feet of Mt. Vernon Avenue (comprised of the bridge and its approaches) from Rialto Avenue on the south to 5th Street on the north. The existing bridge is designated by Caltrans as Bridge No. 54-C0066. The actual bridge structure extends over the BNSF Intermodal Facility, BNSF yard operation tracks, BNSF transcontinental tracks, Metrolink tracks, and a Metrolink parking lot. The bridge is concrete and approximately 50 feet wide and 975 feet long. The south bridge approach extends approximately 300 feet to the north from 2nd Street. The north bridge approach extends approximately 200 feet to the south from 4th Street. The year “1934” (presumed year of construction) was noted to have been imprinted in concrete on the northwestern portion of the bridge.
- The shoofly includes an approximately 6,000-foot long area in the BNSF Intermodal Facility running north of and adjoining to the existing tracks. The area extends from approximately 1,500 feet west of the bridge to approximately 3,000 feet east of the bridge to the intersection of the railroad tracks and 5th Street. The eastern portion of the shoofly curves in a northeasterly direction between the intersection of the railroad tracks and North J Street. The shoofly tracks are temporary tracks that will be used to replace rail capacity during pending bridge demolition/construction activities.
- The site includes a residential area north of the BNSF Intermodal Facility, west of Mt. Vernon Avenue, east of Cabrera Avenue, and south of Kingman Street, which was previously assessed during the September 2017 ISA (Section 4.4.4). Along with residences, this area includes 4th Street, Paniagoa Roofing, and vacant land owned by BNSF. During the site reconnaissance for the September 2017 ISA, a stockpile of crushed concrete was observed on vacant land. This was classified as “undocumented fill” and considered a REC. During the site reconnaissance on February 1, 2018, the stockpile of crushed concrete was not observed. Therefore, this is no longer considered a REC.
- The site consists of portions of the BNSF Intermodal Facility not included in the January 2018 FISA. New portions of the facility include trailer storage areas, parking lots, fueling area, BNSF offices, auto repair building, BNSF loading dock, and electrical transformers.
- The site consists of additional parcels east and west of Mt. Vernon Avenue between the BNSF Intermodal Facility and Kingman Street. The new parcels include a former storage area north of 3rd Street and west of North Mt. Vernon Avenue (currently an empty lot), residences and a car wash west of North Mt. Vernon Avenue and north of 2nd Street, vacant land south of a parking garage east of Mt. Vernon Avenue, and vacant land at the southeast corner of 2nd Street and Mt. Vernon Avenue.

5.3 Adjoining Property Observations

Adjoining properties were observed from the site and from publicly accessible vantage points (e.g., streets, sidewalks) during the site reconnaissance. The properties adjoining to the site are as follows and as depicted on Figure 2:

- **Northeast:** BNSF Intermodal Facility, Pepe’s Nightclub, El Caballo Tire Shop, Sprint retail store, restaurant, insurance services, residential properties.
- **Northwest:** BNSF Intermodal Facility, Arco gasoline station, hotel, pawn shop, residential properties.

- **Southeast:** BNSF Intermodal Facility, San Bernardino Metrolink Station/ Santa Fe Depot and parking lots, vacant land, residential properties, El Agave Bar, M&M Alternators, Manuel's Tires, Wheels, and Auto Repair
- **Southwest:** BNSF Intermodal Facility, parking lots, residential properties, auto repair shop, boot shop, tire shop, and Lytle Creek Flood Control channel.

5.4 Site Observations

Ninyo & Moore evaluated the site for evidence of the following potential environmental concerns:

Table 9 – Site Observations Summary

Conditions	Observed or Noted	Comments
Hazardous Substances/Petroleum Products	X	During the site reconnaissance for the January 2018 FISA, evidence of petroleum products was observed on the site north of the shoofly within BNSF property. Petroleum products observed included a 6,000-gallon diesel AST, a 2,000-gallon gasoline AST, two 240-gallon diesel ASTs, two 240-gallon unleaded fuel ASTs, twenty 55-gallon drums (empty, used filters, antifreeze, motor oil, parts cleaner, hydraulic oil, aerosols) on secondary containment, two 330-gallon ASTs with diesel exhaust fluid, five 300-gallon ASTs (hydraulic fluid, diesel oil, motor oil, transmission oil, detergent), and a small storage shed containing a parts cleaner, two fire closets (aerosols, gasoline, lube oil, paints), and four 55-gallon drums of clean and used motor oil. Fuel and petroleum products observed are reportedly used for maintenance of cranes and hostler vehicles. Surface staining was observed around the stored petroleum products in the "fueling area" depicted in Figure 2.
Waste Generation/Storage/Disposal	X	During the site reconnaissance for this ISA, five ASTs (approximately 250-gallons each) containing oil were observed in the vehicle maintenance area east of the bridge and north of the shoofly, depicted in Figure 2. During the site reconnaissance for the January 2018 FISA, hazardous waste materials observed included a 185-gallon AST containing used motor oil and several 55-gallon drums as described above. In addition, five 55-gallon drums containing non-RCRA hazardous waste were observed north of the hazardous material storage area. The accumulation date on the drums was November 18, 2017.
ASTs	X	Eighteen ASTs were observed on BNSF property north of the shoofly and east and west of the bridge, as described above.
Potential Evidence of USTs		USTs were not observed on-site. However, evidence of USTs were observed at the Arco gasoline station adjoining to the northwest of the site.
Potential PCB-Containing Equipment	X	During the site reconnaissance for the September 2017 ISA, eight pole-mounted transformers were observed around the residential neighborhood between 4 th Street and Kingsman Street. During the site reconnaissance for this ISA, pad-mounted transformers were observed in three areas of the site: one at the southwest corner of the vacant lot west of Mt. Vernon Avenue and north of 3 rd Street; one at the parking structure east and adjoining Mt. Vernon Avenue; and three transformers at the northern end of the BNSF Intermodal Facility. Staining, discoloration, or other signs of release of PCBs was not observed around the transformers. The locations of transformers are depicted in Figure 2.
Chemical/Petroleum Odors		Not observed
Concrete Patches/Pads		Not observed
Pools of Liquid		Not observed

Table 9 – Site Observations Summary

Conditions	Observed or Noted	Comments
Discharge Pipes	X	Discharge pipes, possibly from stormwater capture at nearby parking areas, were observed in vacant land south of the parking structure, east of Mt. Vernon Avenue, and north of 2 nd Street. Staining or other signs of the release of hazardous substances were not observed.
Floor Drains/Sumps	X	During the site reconnaissance for the January 2018 FISA, drains were observed in the hazardous material storage areas north of the shoofly. A drain was observed within the cooling tower enclosure. The cooling tower drain is not considered an environmental concern at this time. During the site reconnaissance for this ISA, storm drains were observed along public roadways and at the vacant lot west of Mt. Vernon Avenue and north of 3 rd Street. Staining or other signs of release of hazardous substances were not observed at the floor drains.
Elevator Wells		Not observed
Drums	X	During the site reconnaissance for the January 2018 FISA, several drums were observed, as described above.
Unidentified Substance Containers		Not observed
Stained Soil or Pavement	X	During the site reconnaissance for the January 2018 FISA, surface staining was observed in the fueling area adjoining west of the bridge and north of the shoofly.
Stressed Vegetation		Not observed
Pits, Ponds, or Lagoons	X	During the site reconnaissance for the January 2018 FISA, a concrete-lined hazardous materials pit was observed north of the proposed shoofly track area and east of the bridge. The pit is used for emergencies resulting from leaking trucks or containers brought into the facility. Substances collected in the hazardous material pit are pumped out by appropriate hazardous waste handlers. The location of the pit is shown in Figure 2, and does not represent a REC to the project site.
Wastewater Discharge Disposal Systems	X	During the site reconnaissance for the September 2017 site reconnaissance, as well as the site reconnaissance for this ISA, a concrete vault that is possibly an oil-water separator was observed on vacant land north of 4 th Street. The oil-water separator was probably used as a wastewater treatment system for Anita's Mexican Food Corp at 1390 4 th Street. During the site reconnaissance for the January 2018 FISA, a wastewater/oil-and-water separator system was observed at the BNSF facility north of the shoofly and west of the bridge. The wastewater/oil-and-water separator system consists of a below grade oil/water separator and an oil recovery AST. Wash water from both the wash pads drain into the below grade oil/water separator. The recovered oil is pumped back to an oil recovery AST.
Septic Systems/Cesspools		Not observed
Municipal Solid Waste Disposal Areas		Not observed

6 VAPOR ENCROACHMENT/INTRUSION

A preliminary vapor encroachment screen (pVES) was conducted for potential COCs that may migrate as vapors onto the site as a result of contaminated soil and/or groundwater near the site. The purpose of the pVES is to identify a VEC, which is the presence or likely presence of COC vapors in subsurface soils at the site caused by the release of vapors from contaminated soil or groundwater either on or near the site. The potential for VEC beneath the site was evaluated using a VESM. The VESM included performing a Search Distance Test to identify if there are any

known or suspect contaminated sites surrounding or up-gradient of the site within specific search radii, a COC Test (for those known or suspect contaminated sites identified within the Search Distance Test) to evaluate whether or not COCs are likely to be present, and a Critical Distance Test to evaluate whether or not COCs in a contaminated plume may be within the critical distance of the site (100 feet for non-petroleum contaminants, and 30 feet for petroleum hydrocarbon contaminants). Based on the historical onsite UST at Anita's Mexican Food, historical chlorinated solvent contamination of groundwater at the ATSF/BNSF facility, up-gradient drycleaner Lords Dry Cleaners at 1061 5th Street that operated between 1936 and 1990, a VEC cannot be ruled out beneath the site, which is considered a REC. A copy of the VESM is included in Appendix E.

7 FINDINGS, OPINIONS, CONCLUSIONS, AND RECOMMENDATIONS

Based upon the results of this supplemental ISA, the following findings, opinions, and conclusions are provided.

7.1 Findings and Opinions

The following presents a summary of findings and opinions associated with this supplemental ISA performed for the site, including known or suspect RECs, HRECs and *de minimis* environmental conditions (i.e., conditions that generally do not present a material risk of harm to public health or the environment):

- The site includes an approximate 2,700-foot stretch of Mt. Vernon Avenue (including the bridge and its approaches) from West Rialto Avenue in the south to West 5th Street in the north. The shoofly includes an approximately 6,000-foot long area in the BNSF Intermodal Facility running north of and adjoining to the existing tracks. The area extends from approximately 1,500 feet west of the bridge to approximately 3,000 feet east of the bridge to the intersection of the railroad tracks and West 5th Street. Other portions of the site include a residential neighborhood between West 4th Street and West Kingman Street, portions of the BNSF Intermodal Facility north of the shoofly, a vacant lot west of the bridge and north of West 3rd Street, residential properties and a car wash west of Mt. Vernon Avenue and north of West 2nd Street, and vacant land east of Mt. Vernon Avenue north and south of West 2nd Street.
- Based on the findings of this ISA, a total number of two onsite HRECs and seven onsite RECs (does not include four potential/conditional RECs) have been identified for the site. The HRECs and RECs for the site are discussed below.
- Soil underlying the northern portion of the bridge within BNSF property has been impacted with TPH from historical railway operations. Impacted soil in areas adjoining the northern end of the bridge on both the east and west sides of the bridge was excavated between May 1994 and February 1995. Regulatory closure for impacted soil was granted in May 2003. However, portions of impacted soil may still be in place underneath the bridge. Additionally, the results of Ninyo & Moore's 2013 LSI encountered TPH in borings DP-3 and DP-4A, which were drilled underneath the northern section of the bridge. This is considered a REC.

- Elevated concentrations of constituents of concern (metals, PCE, TPH, and SVOCs) were reported in soil samples collected from the shoofly, SBCTA, and BNSF properties during a LSI conducted by Ninyo & Moore in 2013; namely lead which was found at concentrations indicating hazardous characterization. On the shoofly alignment, some of the soil disturbed during earthmoving activities may be classified as a hazardous waste with respect to lead. Therefore, special considerations may be necessary for handling some excavated soil for the project. This is considered a REC.
- A VES/VTs was installed to remediate solvent contaminated soil in the immediate vicinity of the former diesel shops in the proposed shoofly track area on BNSF property. A NFA was issued for the solvent contaminated soil and groundwater by the RWQCB and a closure letter was issued for the BNSF property in 2006 and 2011. This is considered an HREC.
- An NFA letter for the ex-situ remediation of eight areas of the BNSF Rail Yard was issued on March 3, 2004. The areas where excavation had occurred, which were previously impacted by TPH, heavy metals, or brine, included the new and former Industrial Wastewater Treatment Plant, former Brine Ponds, Mt. Vernon Avenue area, former Car Shops, former Diesel Shops, and former Union Pacific Railroad Facility. The presence of these former excavation areas is considered an HREC.
- A fueling area, an oil/water separator system, and two wash pads are adjacent and north of the shoofly and west of the bridge. The fueling area contains a 6,000-gallon diesel AST, a 2,000-gallon gasoline AST, two 240-gallon diesel ASTs, two 240-gallon unleaded fuel ASTs, twenty 55-gallon drums (empty, used filters, antifreeze, motor oil, parts cleaner, hydraulic oil, aerosols) on secondary containment, two 330-gallon ASTs with diesel exhaust fluid, five 300-gallon ASTs (hydraulic fluid, diesel oil, motor oil, transmission oil, detergent), and a small storage shed containing a parts cleaner, two fire closets (aerosols, gasoline, lube oil, paints), and four 55-gallon drums of clean and used motor oil. Surface staining was observed on concrete around the stored petroleum products. This is considered a *de minimis* condition, and is not a REC to the site, unless excavation and earthmoving is proposed in this area.
- Two 55,000-gallon fuel ASTs were present north of the shoofly and west of the bridge from 1938 through 1968; these are not considered RECs to the site.
- The site was on and adjoining to multiple roadways, including State Route 66, and the ATSF/BNSF railroad facility prior to 1992, when leaded gasoline was utilized. Therefore, there is a potential presence of ADL in shallow unpaved soil along Mt. Vernon Avenue, 4th Street, and railroad tracks at the site, which represents a REC
- Railroad ties were observed during the site reconnaissance near the bridge and shoofly areas. It is unknown if these ties have been treated with creosote. If railroad ties have been treated with creosote, this is considered a REC to the site.
- Anita's Mexican Food Corp at 1390 West 4th Street was listed on historical UST databases (SWEEPS UST, CA FID UST). Additionally, Anita's was issued a SCAQMD permit to operate a gasoline storage and dispensing station in 1983 and 1990. Based on the presence of a gasoline UST on the site, and lack of information regarding its removal, this information is considered a REC.
- A concrete vault, possibly an oil-water separator, was observed on vacant land north of 4th Street. The oil-water separator was probably used as a wastewater treatment system for the old restaurant, Anita's Mexican Foods Corp at 1390 West 4th Street. This is considered a REC.

- A stockpile of crushed concrete was observed on vacant land north of West 4th Street in the September 2017 ISA. This was classified as “undocumented fill” and considered a REC in the September 2017 ISA. However, during the site reconnaissance on February 1, 2018, the stockpile of crushed concrete was not observed. Therefore, this is no longer considered a REC.
- Two historical gasoline and oil service stations were reported at the site: the former Viscie Benedict Gas at the southwest corner of the intersection of Mt. Vernon Avenue and West 5th Street, and the former Auto Tune at the intersection of West 2nd and North Giovanola Avenue. Additionally, an Arco gasoline station with USTs is currently present at the northwest corner of Mt. Vernon Avenue and West 5th Street. Also, a car wash was observed west of North Mt. Vernon Avenue and north of 2nd Street. These facilities are not considered RECs unless soil excavation and earthmoving activities will be conducted that may encroach on these properties.
- Significant data gaps were not encountered during the preparation of this supplemental ISA report.
- Based on the historical onsite UST at Anita’s Mexican Food, historical chlorinated solvent contamination of groundwater at the ATSF/BNSF facility, up-gradient drycleaner Lords Dry Cleaners at 1061 5th Street that operated between 1936 and 1990, a VEC cannot be ruled out beneath the site, which is considered a REC.
- Ninyo & Moore has conducted two previous asbestos and LBP surveys in 2004 and 2010. The reports can be found in Appendix B of the January 2018 FISA. Although considered an ASTM non-scope issue, based on the findings of these surveys, LBP and ACM may be encountered during demolition of the Mt. Vernon Avenue Bridge. This is not considered a REC.

7.2 Conclusions

This supplemental ISA was performed in conformance with the scope and limitations of ASTM Practice E 1527-13 for the Mt. Vernon Bridge Project and includes an expanded project area along N. Mt. Vernon Avenue between West 5th Street and West Rialto Avenue, in the city of San Bernardino, California. Any exception to, or deletions from, this practice are described in Section 1.4 of this report. This assessment has revealed no evidence of environmental conditions in connection with the site except for the following:

- Soil underlying the northern portion of the bridge within BNSF property has been impacted with TPH from historical railway operations. Impacted soil in areas adjoining the northern end of the bridge on both the east and west sides of the bridge was excavated between May 1994 and February 1995. Regulatory closure for impacted soil was granted on May 2003. However, portions of impacted soil may still be in place underneath the bridge. Additionally, the results of Ninyo & Moore’s 2013 LSI encountered TPH in borings DP-3 and DP-4A, which were drilled underneath the northern section of the bridge. This is considered a REC.
- Elevated concentrations of constituents of concern (metals, PCE, TPH, and SVOCs) were reported in soil samples collected from the shoofly, SBCTA, and BNSF properties during a LSI conducted by Ninyo & Moore in 2013; namely lead which was found at concentrations indicating hazardous characterization. On the shoofly alignment, some of the soil disturbed during earthmoving activities may be classified as a hazardous waste with respect to lead.

Therefore, special considerations may be necessary for handling some excavated soil for the project. This is considered a REC.

- The potential presence of ADL in shallow unpaved soil along Mt. Vernon Avenue, 4th Street, and railroad tracks at the site is considered a REC, due to the presence of adjoining roadways, including State Route 66 and the BNSF railroad facility prior to 1992, when leaded gasoline was utilized.
- Anita's Mexican Food Corp at 1390 West 4th Street was listed on historical UST databases (SWEEPS UST, CA FID UST). Additionally, Anita's was issued a SCAQMD permit to operate a gasoline storage and dispensing station in 1983 and 1990. Based on the presence of a gasoline UST on the site, and lack of information regarding its removal, this information is considered a REC.
- The presence of a concrete vault, possibly an oil-water separator, on the southern portion of the site (Anita's Mexican Food Corp at 1390 West 4th Street) is considered a REC.
- Based on the results of the VESM, a VEC cannot be ruled out beneath the site, and is considered a REC.
- Although considered an ASTM non-scope issue, based on their age, ACM and LBP may be encountered on structures to be demolished at the site, which is not considered a REC. Appropriate surveys for these materials should be conducted prior to demolition.

7.3 Recommendations

Based on the results of this ISA, Ninyo & Moore makes the following recommendations:

- If proposed demolition/construction activities will impact soil beneath the following areas, a Site Investigation should be conducted consisting of collecting soil samples and analysis for petroleum hydrocarbons, volatile organic compounds (VOCs), and/or lead prior to the construction phase:
 - The extent of the proposed shoofly track area in the BNSF Intermodal Facility
 - Two former gasoline and oil service stations Viscie Benedict Gas and Auto Tune
 - Current Arco station
 - Fueling area in the BNSF Intermodal Facility
 - Anita's Mexican Food at 1390 West 4th Street
- A hazardous materials contingency plan should be prepared to address the potential for discovery of unreported USTs or other underground structures, creosote-treated railroad ties, septic systems, hazardous materials, petroleum hydrocarbons, or hazardous or solid wastes encountered during construction. This contingency plan should address UST decommissioning, field screening and materials testing methods, mitigation and contaminant management requirements, and health and safety requirements.
- Caltrans Standard Special Provisions and Non-Standard Special Provisions should be prepared that provide contractors with guidance on preparing submittals and handling impacted materials.

- A soil monitoring plan should be prepared prior to construction and should be implemented during all phases of construction. Disturbed soils should be monitored for visual evidence of contamination (e.g., staining or discoloration). If visual evidence of contamination is observed, the soil should be monitored for the presence of VOCs using appropriate field instruments such as organic vapor measurement with photoionization detectors or flame ionization detectors. If the monitoring procedures indicate the possible presence of contaminated soil, a contaminated soil contingency plan should be implemented and should include procedures for segregation, sampling, and chemical analysis of soil. Contaminated soil will be profiled for disposal and will be transported with appropriate hazardous or non-hazardous waste manifests by a state-certified hazardous material hauler to a state-certified disposal or recycling facility licensed to accept and treat the type of waste indicated by the profiling process. The contaminated soil contingency plan should be developed and in place during all construction activities. In the event that these processes generate any contaminated groundwater that must be disposed of outside of the dewatering/NPDES process, the groundwater should be profiled, manifested, hauled, and disposed of in the same manner.
- Appropriate pre-demolition surveys for LBP and ACM of existing structures to be removed should be conducted.
- Demolition or renovation of any structure requires notification and submittal of fees to the SCAQMD.

It is understood that additional subsurface evaluation may be conducted during the design/build phase of this project. The results of our LSI in 2013 indicated the presence of TPH-impacted soil underneath the northern portion of the Mt. Vernon Ave Bridge and lead-impacted soil (as well as some TPH and PCE impacts) along portions of the shoofly area. Future construction and demolition operations should be aware of these areas and excavate, segregate, and dispose of impacted soils.

8 ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined by §312.10 of 40 Code of Federal Regulations (CFR) 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the AAI in conformance with the standards and practices set forth in 40 CFR Part 312.

John Jay Roberts, PG, CEG
Principal Geologist

As a Senior Geologist, Mr. Jay Roberts has extensive experience performing environmental and geotechnical investigations of commercial and industrial properties and environmental site assessments of school sites, including Initial Site Assessments (ISAs), Hazardous Materials Assessments (HMAs), Phase Is, Phase IIs, PEA, SSI, RAW, RAP, and O&M plans. Mr. Roberts has completed characterization, remediation, and human health assessments on numerous properties. He has prepared successful applications for Brownfields clean-up grants and managed and performed hydrogeologic investigations, groundwater resource evaluations, and water supply studies. He also provides expert witness and litigation support for environmental, geotechnical, and mining matters.

REPRESENTATIVE PROJECT EXPERIENCE

Initial Site Assessment Ball Road Grade Separation, Anaheim, California: Technical Director for an ISA for the Ball Road Grade Separation Project in Anaheim. The project includes evaluation of alternatives for Ball Road at the interchange with the Metrolink/SCRRA Railroad rail crossing. The ISA included review of historical sources for previous uses involving hazardous wastes, regulatory agency databases research, and site reconnaissance to view for indications of potential hazardous waste impact on facilities along the proposed alignments.

Initial Site Assessment Raymond Avenue Grade Separation, Fullerton, California: Technical Director for an ISA and ADL for the Raymond Avenue Grade Separation Project in Fullerton. The project includes the lowering of Raymond Avenue to create an underpass at the Burlington Northern Santa Fe (BNSF) rail crossing. The Project in-progress will include an ADL Survey and subsurface investigation for suspected impacts in the exposed soil areas along Raymond and Valencia Avenues.

Initial Site Assessment State College Boulevard Separation and ADL Survey, Fullerton, California: Technical Director for an ISA and ADL for the State College Boulevard Separation Project in Fullerton. The project involves the lowering of State College Boulevard to create an underpass at the Burlington Northern Santa Fe (BNSF) rail crossing. The Project includes an ADL Survey in the exposed soil areas along State College Boulevard.

Initial Site Assessment Mount Vernon Avenue Bridge Expansion, San Bernardino, California: Technical Director for an ISA for the Mount Vernon Bridge Expansion project. The Project involved research and review of historical documents into property uses dealing back into the early 1900's due to long history of the site usage as a railroad hub. The records reviewed consisted of environmental investigations, remedial activities, and contaminated groundwater. Regulatory agencies representatives were also contacted for specifics on current states of remedial activities at impacted sites within the influence of the Project.

Initial Site Assessment Milliken Avenue, Mission Boulevard, and Philadelphia Street, Ontario, California: Technical Director for an ISA and ADL for the proposed grade separation at the existing at-grade crossing of South Milliken Avenue and the Union Pacific Railroad (UPRR) in Ontario, California. The Project includes an ADL survey to be performed adjacent to Milliken Avenue, Mission Boulevard, and Philadelphia Street to evaluate surface and subsurface soil for the presence and concentration of ADL in proposed roadway improvement areas.

Phase I Environmental Site Assessments, Tehachapi Renewable Transmission Project, Kern County, California for Southern California Edison (SCE): Project Manager for Phase I Environmental Site Assessments (ESAs) for 10 separate Sites in Kern County, California for Southern California Edison (SCE) for the Tehachapi Renewable Transmission Project. The Phase I ESAs were performed in accordance with the ASTM International (ASTM), Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process Designation E 1527-05 and Practices for All Appropriate Inquiries (AAI) as set forth in the Code of Federal Regulations (CFR), Title 40, Part 312. In order to meet the accelerated schedule for the project, the 10 separate Phase I ESA reports were completed within approximately three weeks from authorization. In accordance with the ASTM and AAI requirements, Ninyo & Moore reviewed readily available historical documents, including historical aerial photographs, Sanborn Fire Insurance Rate maps, building department records, historical topographic maps, and city directories, as applicable. Ninyo & Moore conducted a review of federal, state, tribal, and local regulatory agency databases for each Site and for properties located within the specified radius (by the ASTM Standard) of each Site for locations of known hazardous waste sites, landfills, leaking underground storage tanks (LUSTs), and permitted facilities with USTs.

REPRESENTATIVE PROJECT EXPERIENCE (continued)

The Phase I ESAs included a reconnaissance of each Site to document existing hazardous materials handling, storage, and disposal practices, areas of possibly contaminated surficial soil or surface water, possible sources of polychlorinated biphenyls (PCBs), USTs and ASTs, and possible sources of contamination from activities at the Site and adjacent properties, and an interview of each Site property representative. The results of each Phase I ESA were presented in a comprehensive report, which included a summary whether or not recognized environmental conditions (RECs) were found on any of the 10 Sites.

Environmental Site Assessments and Hazardous Building Materials Survey, Beverly Hills Post Office Building, California: Project Manager for a Preliminary Environmental Site Assessment/Phase I ESA of the proposed Wallis Annenberg Cultural Center of Beverly Hills. The site consisted of the existing historic Beverly Hills Post Office building and surrounding parking lots proposed to be converted to a new cultural center, including an underground parking structure proposed to be constructed beneath existing street rights of way and portions of the adjacent Beverly Hills City Hall property. Ninyo & Moore reviewed historical and regulatory records, conducted a site reconnaissance, and interviewed property representatives in order to prepare a comprehensive report summarizing potential environmental concerns associated with redevelopment of the site. Potential environmental concerns (PECs) included the historical development of the site as lumber storage yard, a train depot, and railroad right-of-ways, the former presence of an underground storage tank, and releases associated with off-site fire station and gas station facilities. Also, due to the age of the building the presence of the potential presence of asbestos-containing materials (ACMs), lead-based paints (LBPs), and other hazardous building materials was suspected.

Environmental Assessments for 12 School Sites, Western Riverside County, California: Project Manager for Phase I studies through complete environmental investigations and site closure status granted by DTSC, the lead regulatory agency. All 12 sites required DTSC's rigorous PEA investigations, including soil gas and/or soil matrix sampling. One site required a soil RAW and implementation. Public participation services in accordance with DTSC requirements were also provided.

Environmental Assessments for 10 School Sites, Western San Bernardino County, California: Project Manager for Phase I studies through complete environmental investigations and site closure status granted by DTSC, the lead regulatory agency. All 10 sites required DTSC's rigorous PEA investigations, including soil gas and/or soil matrix sampling. Sampling and analyses was conducted on the sites primarily for past agricultural activities. One site required an additional investigation for an on-site burn dump. Public participation services in accordance with DTSC requirements were also provided to the client school district.

Environmental Consulting Services for Commercial, Industrial, and Residential Properties Throughout California, Oregon, and Washington: Project Manager for Phase I studies throughout the western United States. Mr. Roberts managed, directed, coordinated a staff conducting Phase Is, and reviewed and signed each report. These services were performed for a variety of fiduciary institutions, attorneys, and school districts. These services included complete investigations to meet ASTM standards, as well as additional studies required by the client. In order to fully characterize conditions, Phase II investigations were recommended and completed, ranging from additional historical research through soil and/or groundwater sampling.

EXPERIENCE HIGHLIGHTS

Phase I Environmental Site Assessments
Sampling Surveys
1166 Soil Monitoring
Preliminary Environmental Assessment

Mr. Patrick Cullip has over three years experience performing environmental remediation, operations and maintenance (O&M), remediation system installation, groundwater/soil vapor sampling, well installation, underground storage tank (UST) removal, soil contamination removal, dual-phase extractions, aerially-deposited lead (ADL) sampling, geological and geotechnical logging, quarterly groundwater monitoring reports, pilot test reports, design, and oversight projects; conducting environmental site assessments (ESAs) and feasibility testing; and evaluating regulatory compliance.

REPRESENTATIVE PROJECT EXPERIENCE

Port of Los Angeles, Wilmington, California: Senior Staff Environmental Engineer, conducted groundwater monitoring on numerous existing monitoring wells, using hand bailers.

Long Beach Unified School District, Long Beach, California: Senior Staff Environmental Engineer, collected soil samples using hand-auger and direct-push methods, to assess lead and pesticide contamination from lead based paint and termiticides along the edges of classroom and administrative buildings at Jordan High School, and prepared reports for government agencies. Sample results were used to determine the extent of contamination and potential associated health risks to field personnel participating in planned remodeling/demolition activities. Prepared the preliminary environmental assessment (PEA) report for sampling and associated remedial action work plan (RAW) for required soil remediation.

City of Los Angeles, Temescal Canyon Park Storm Water Project, Pacific Palisades, California: Senior Staff Environmental Engineer, conducted South Coast Air Quality Management District Rule 1166 air monitoring of soil being excavated for future storm water holding tank. The soil consists of undocumented fill found to contain petroleum hydrocarbons.

Caltrans, Various Locations, Southern California: Senior Staff Environmental Engineer, collected soil samples, using hand-auger methods, of roadside soils to assess aerially deposited lead (ADL) impacts of soil from years of contamination from leaded gasoline. Sample results were used to determine the waste classification for proper disposal and handling of road and highways improvements.

Phase I ESAs – Various Sites, Southern California: Field Manager, performed numerous Phase I ESAs of commercial, industrial, and residential properties throughout Southern California for various financial institutions, land developers, and government agencies. The Phase I ESAs included reviewing regulatory files of various government agencies to evaluate the extent and type of impacts at sites, conducting site walks and owner/operator interviews, and preparing reports.

Los Angeles Unified School District (LAUSD), Los Angeles, California: Oversaw groundwater/soil vapor extraction tests at various sites to determine extent of contamination. Field Manager for a complex site excavation for future school; tasks included lead/hydrocarbon soil testing, hazardous/non-hazardous soil removal, and air quality monitoring. Directed cleaning/removal of USTs, soil contamination chase-out, and removal. Supervised installation of groundwater/soil vapor monitoring wells. Directed maintenance on groundwater/soil vapor systems. Organized, managed, and operated numerous dual-phase extraction tests to remove site contaminants. Executed various O&M visits for existing soil vapor and groundwater remediation systems. Tracked effluent readings for various sites to ensure permitting compliance. Prepared dozens of environmental reports including quarterly groundwater monitoring reports, pilot tests, site assessments, remedial action plans, and RECAPs.

EDUCATION

B.S., Environmental Engineering, 2015,
Tufts University

REGISTRATIONS AND CERTIFICATIONS

Registered Engineer in Training,
Massachusetts, #24740
40-Hour HAZWOPER Certification
BNSF Rail Safety training
SCRRA Railroad Safety
LAX Security Badge
RSO Refinery Training

As a Staff Engineer with Ninyo & Moore, Mr. Fee has worked on a large variety of environmental projects, including but not limited to: Phase I & Phase II Environmental Site Assessments (ESAs), Hazardous Materials Assessments (HMAs), aerially-deposited lead (ADL) sampling and reporting, geological logging, groundwater monitoring and sampling, report writing and data compilation, oversight of drilling activities, and PCB abatement monitoring.

REPRESENTATIVE PROJECT EXPERIENCE

South Coast Water District (SCWD), San Juan Creek Property Tenant Inspections, Dana Point, California: Field personnel/staff engineer: Conducted inspections of tenant storage facilities to determine the quantity of hazardous materials stored, and whether a hazardous material business plan was warranted based on the quantities. The inspections also included an assessment of releases or leaks of hazardous materials or petroleum products into site soils. Mr. Fee provided data organization and compilation services on this project as well.

C&C Jewelry (CCJ) Wastewater Compliance Inspections, Los Angeles, California: Field personnel/staff engineer: Conducted inspections and sampling of wastewater discharge at a jewelry manufacturer as part of the facility's industrial wastewater permit. Prepared periodic compliance reports as part of the City of Los Angeles Industrial Waste Management Division requirements.

Metropolitan Water District (MWD), Diemer Water Treatment Plant, Yorba Linda, California: Field personnel/staff engineer: Conducted air sampling and dust monitoring in basin remediation areas with suspected polychlorinated biphenyl (PCB) contamination, inspected and mitigated caulking, concrete, and other materials for PCB contamination, in order to achieve environmental compliance with the environmental protection agency (EPA).

Judicial Council of California, Phase II ESA, Proposed Inyo County Courthouse, Bishop, California: Field personnel/staff engineer: Conducted a Phase II Environmental Site Assessment in a proposed area for the Inyo County Courthouse, which included soil, soil gas, and groundwater sampling due to the suspected contamination from a nearby leaking underground storage tank (LUST), as well as providing data compilation and report writing services.

Raymond Avenue Grade Separation Project, Fullerton, California: Field personnel/staff engineer: Oversaw drilling and soil sampling activities in construction areas of Raymond Avenue in Fullerton, provided insight in technical illustration, data compilation and analysis to determine the extent, if any, of environmental contamination from the nearby railroad and other site uses.

Going, Going, Gone (GGG) Demolition, Port of Los Angeles Berths 171-173: Field personnel/staff engineer: Conducted groundwater and ocean water monitoring and sampling at the Port of Los Angeles, with known contamination of lead and petroleum hydrocarbons, to assess the impact of the implementation of bioremediation technologies.

REPRESENTATIVE PROJECT EXPERIENCE (continued)

Phase I ESAs, HMAs, and ISAs – Various Sites, Southern California: Field Personnel/Staff Engineer, Performed numerous Phase I ESAs, HMAs, and ISAs of commercial, industrial, and residential properties throughout Southern California for various financial institutions, land developers, and government agencies. The Phase I ESAs, HMAs, and ISAs included reviewing regulatory files of various government agencies to evaluate the extent and type of impacts at sites, conducting site walks and owner/operator interviews, preparing reports, and project oversight. Mr. Fee performed Phase II ESAs at several of these properties which included soil gas, soil, and groundwater evaluations.

HMA, Olive View UCLA Medical Center, Sylmar, California: Field personnel/staff engineer: Conducted an HMA at the UCLA Olive View Medical Center in Sylmar, which included a thorough site reconnaissance of the medical building, gas cylinder storage areas, fuel storage tanks, electrical systems, and helicopter pad, a review of hazardous waste manifests, a review of historical uses of the site from aerial, topographic, and sanborn maps, an interview with the environmental manager of the site, data organization and report writing.

Lincoln Avenue Widening Project HMA, Anaheim, California: Field personnel/staff engineer: Conducted an HMA on a section of Lincoln Avenue in Anaheim, for a road widening project. The HMA included a site reconnaissance to evaluate for the presence of hazardous materials, if any, adjacent to the site, a review of public records with environmental agencies for two adjacent LUST cases that may have affected the environmental integrity of the site, data organization, and report writing services.

Former Ace-Cogeneration Facility, Trona, California: Field personnel/staff engineer: Conducted sampling of lysimeters to evaluate for the presence of contamination from ash piles, byproducts from the former usage of the site as a clean coal power plant. Lysimeters are unique in that they enable one to sample pore water from the vadose zone of a site, and require the application of vacuum pressure for long periods of time to extract the pore water. Mr. Fee also provided technical illustration, data compilation, global positioning, and report writing services on this project.

PEA, Temple City High School, Temple City, California: Field personnel/staff engineer: Aided in the implementation of a Preliminary Environmental Action (PEA) report at a high school in Temple City. The scope of services included soil sampling to determine the extent of arsenic usage in site soils, technical illustrations to aid in the display of the extent of impacts, oversight of soil excavation and off-site transportation, and coordination with the California Department of Toxic Substances Control (DTSC) to achieve environmental compliance.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/11/2017 has revealed that there is 1 SEMS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to,

EXECUTIVE SUMMARY

identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/30/2017 has revealed that there are 12 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 28 LUST sites within approximately 0.5 miles of the target property.

SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the SLIC list, as provided by EDR, has revealed that there are 4 SLIC sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 6 UST sites within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 12 SWEEPS UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Facility Id: 32076

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2016 has revealed that there are 14 HAZNET sites within approximately 0.001 miles of the target property.

EXECUTIVE SUMMARY

HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSITES]. This listing is no longer updated by the state agency.

A review of the HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there are 11 HIST CORTESE sites within approximately 0.5 miles of the target property.

HWT: A listing of hazardous waste transporters. In California, unless specifically exempted, it is unlawful for any person to transport hazardous wastes unless the person holds a valid registration issued by DTSC. A hazardous waste transporter registration is valid for one year and is assigned a unique registration number.

A review of the HWT list, as provided by EDR, and dated 10/10/2017 has revealed that there is 1 HWT site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 20 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 6 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Summary Details:

Conditions at proposal June 24, 1988): The four municipal supply wells of Newmark Well Field are in an area of approximately 700 square feet bounded by 48th Street, Magnolia Drive, Reservoir Drive, and the San Bernardino County Flood Control Channel in the Muscoy area north of San Bernardino, San Bernardino County, California. The San Bernardino Municipal Water Department was forced to close the four wells in the early 1980s when they were found to be contaminated with high levels of halogenated organic chemicals, including tetrachloroethylene, also known as perchloroethylene (PCE), and trichloroethylene (TCE). An August 1986 report by a consultant to the California Regional Water Quality Control Board identified possible contaminant sources. A midnight dumping operation from the late 1950s to early 1960s appears to be the most likely source of contamination. It is approximately 300 feet upgradient of the Newmark wells. The California Department of Health Services is installing air stripping towers to remove contaminants from ground water. The towers are scheduled to be in operation in mid-1988. An additional 10 municipal wells in San Bernardino have also been retired from service due to PCE/TCE contamination. An apparent hydrogeologic barrier, the Pelona Schist outcrop of the Shandin Hills, suggests that contamination of these 10 wells is originating from different sources. The 14 municipal wells that have already been retired from service served 25 percent of the city's total population, and additional wells are also threatened. The San Bernardino wells supply 80,000 people in the cities of San Bernardino and Loma Linda, and the loss of any additional wells could leave some areas without water. The municipal supply wells for Riverside also lie directly downgradient. No alternative water sources are

Site Description: In 1980, the California Department of Health Services (DHS) initiated a monitoring program in San Bernardino to test for the presence of industrial chemicals in the water from public supply wells. The results of the tests revealed the presence of perchloroethylene (PCE) and trichloroethylene (TCE) contamination in large portions of the ground water of the Bunker Hill Basin.

NEWMARK GROUND WATER CONTAMINATION (Continued)

1000296132

Fourteen wells operated by the city of San Bernardino Water Department in the North San Bernardino/Muscoy area were found to contain concentrations of PCE and TCE above the state and federal Maximum Contaminant Levels (MCLs) of 5 parts per billion for both TCE and PCE. The affected wells had supplied nearly 25 percent of the water for the city of San Bernardino. Following investigations by The Santa Ana Regional Water Quality Control Board and California Department of Health Services (now the California EPA Department of Toxic Substances Control), the state provided over \$6 million to construct four water treatment systems to protect the public water supply. After years of testing these agencies determined that the solvents in the ground water were continuing to flow south and threatening many more wells operated by San Bernardino, Riverside and other communities. The state requested federal involvement to address this regional problem. The EPA placed the Newmark site on the National Priorities List (NPL) in March, 1989. The EPA Remedial Investigation (RI) began in late 1990, focusing entirely on the Newmark Plume. Based upon the findings of the RI, the Muscoy plume on the western side of the valley was included as part of the Newmark Superfund Site. Additional RI well sampling in the vicinity of the Muscoy plume was conducted in September 1992. The RI/FS Report for the Muscoy Plume Operable Unit (OU) was finalized in December, 1994. As a result of the RI investigation, the San Bernardino Airport was no longer suspected to be the source of the Newmark plume as originally identified in the aerial photographic analysis conducted by EPA's Environmental Monitoring Systems Laboratory in September, 1990. Ongoing investigations are attempting to definitively identify the source. The Newmark Groundwater Contamination Superfund Site includes three Operable Units (OUs): the Newmark and Muscoy OUs are located within the San Bernardino portion of the Bunker Hill Basin, near the Shandin Hills, and the Source OU is generally located in the area northwest of the Shandin Hills. The Newmark Groundwater contamination Superfund Site covers approximately eight square miles of groundwater contaminated with volatile organic compounds (VOCs), including tetrachloroethene (PCE), trichloroethene (TCE). These chemicals are industrial solvents that have been commonly used for a variety of including dry cleaning, metal plating and machinery degreasing. The pattern of contamination indicates that a release or releases occurred in northwest San Bernardino and that contaminants have migrated more than five miles toward the Santa Ana River to the southeast. The plume is split by a major outcrop of relatively impermeable bedrock and divides the contaminated ground water into an eastern branch (the Newmark plume) and a western branch (the Muscoy plume). EPA is addressing the leading edges of the plume as two separate OUs. The identification, characterization and remediation of the source of contamination will constitute a third OU. The ground water contamination at the Newmark Superfund Site affects a large portion of a 110 square mile aquifer in the San Bernardino Valley of southern California. The aquifer, known as the Bunker Hill Basin, is bounded by the San Bernardino and San Gabriel Mountains to the north, the Crafton Hills and badlands on the southeast, and by a hydrogeologic barrier formed by the San Jacinto fault along the southwest. Waters flowing from all parts of the aquifer join in a confined artesian zone before leaving the basin where the Santa Ana River crosses the San Jacinto fault line. The ground water currently serves approximately a half-million residents of San Bernardino, Riverside and surrounding communities. The San Bernardino Valley Municipal Water District has indicated that the Bunker Hill Basin Aquifer is capable of storing approximately 1.6 trillion gallons and producing 81 billion gallons each year. The aquifer receives rainfall and natural runoff from the surrounding mountains, collected floodwater from rivers, creeks and washes, and water imported from outside the region that is spread over percolation basins. Residential and commercial use predominates throughout the Newmark Superfund Site. On October 30, 1986, the California Department of Toxic Substances

Control (DTSC) contracted with the City to construct, operate and maintain four treatment systems consisting of air stripping and liquid granular activated carbon units located at the Newmark wellfield and elsewhere, and DTSC and its assigned remedial project manager directed and oversaw the City's work on the design, construction, operation and maintenance of those treatment systems. DTSC paid for the design and construction of these four treatment systems and appurtenant facilities at the Newmark wellfield. The City has paid for, and continues to pay for, the operation and maintenance of these treatment systems, and the City paid for and constructed appurtenant storage and distribution facilities needed to accommodate these treatment systems. EPA placed the Newmark Groundwater contamination Superfund Site on the National Priorities List (NPL) in March 1989. In 1990, EPA began the Remedial Investigation (RI) and the Feasibility Study (FS) of the Newmark OU. For the Newmark RI, monitoring wells were drilled and sampled in the Newmark OU, and nearby City and State wells were also sampled by EPA. PCE and TCE were found in all of the affected wells. The FS evaluated a range of cleanup alternatives for addressing the five-mile long groundwater contamination plume. The report for the Newmark OU was finalized in March 1993. On August 4, 1993, EPA issued a Record of Decision (ROD) that identified the methods that EPA would use to contain and clean up the Newmark OU groundwater contamination. The remedy for the Newmark plume is an interim remedial action which addresses the public health threats from the groundwater contamination. It consists of the following features: (1) groundwater extraction (pumping) and treatment facilities at two locations in the aquifer (the North and south Areas); (2) removal of contaminants from groundwater using liquid phase granular activated carbon filtration; and (3) the final use of treated water. Construction of the Newmark OU extraction and treatment system was completed in October, 1998, and was determined to be operational and functional in October 2000. Additional investigation in the summer of 1992 traced the direction of the groundwater contamination flow into the western side of the Shandin Hills. Based on this information, the Newmark Groundwater contamination Superfund Site was officially expanded in September 1992 to include the Muscoy groundwater plume, located west of the Shandin Hills, as the Muscoy OU. EPA completed the RI/FS of possible treatment alternatives for the Muscoy groundwater contamination, and the RI/FS report for the Muscoy OU was issued in December 1994. The Muscoy OU ROD was signed on March 24, 1995. The ROD for the Muscoy groundwater contamination selects an interim remedial action focusing on preventing contamination from spreading to clean parts of the aquifer south and west of the Shandin Hills. Much of the analysis for selecting a cleanup plan for the Newmark groundwater contamination was directly applicable to the Muscoy plume: Construction of the Muscoy OU extraction and treatment system is anticipated to be completed in 2004, and the performance evaluation of the system is anticipated to be completed in 2005. The U.S. EPA's primary objective for the 1993 and 1995 Interim RODs for the Newmark and Muscoy OUs is to withdraw, treat and dispose of contaminated groundwater, and inhibit any further spread of contamination to clean areas of the aquifer. This is being accomplished for the Newmark and Muscoy OUs by the completion of the construction and operation of the water treatment plants and the barrier wells located along 11th and 14th Streets in San Bernardino, which are expected to remove 21,000 pounds of contaminants over the next 50 years. An Explanation of Significant Differences (ESD) addressing the Newmark OU (OU 1) and the Muscoy OU (OU2) was completed on August 9, 2004. The Source OU RI/FS is still being conducted with the participation of the United States Army Corps of Engineers. A ROD for the Source OU will be issued after completion of the RI/FS.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Reclamation: Not reported
POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Relative:
Lower

RCRA-SQG:

Date form received by agency: 09/19/2001

Facility name: BURLINGTON NORTHERN SANTA FE RAILWAY CO

Facility address: 1450 W RIALTO AVE
SAN BERNARDINO, CA 92410

EPA ID: CAR000105940

Mailing address: 740 E CARNEGIE DR
SAN BERNARDINO, CA 92408-3571

Contact: JOHN CHAVEZ

Contact address: 740 E CARNEGIE DR
SAN BERNARDINO, CA 92408-3571

Contact country: US

Contact telephone: 909-386-4082

Contact email: Not reported

EPA Region: 09

Classification: Small Small Quantity Generator

Description: Handler: generates more than 100 and less than 1000 kg of hazardous waste during any calendar month and accumulates less than 6000 kg of hazardous waste at any time; or generates 100 kg or less of hazardous waste during any calendar month, and accumulates more than 1000 kg of hazardous waste at any time

Owner/Operator Summary:

Owner/operator name: BURLINGTON NRTHRN SANTA FE R

Owner/operator address: 740 E CARNEGIE DR
SAN BERNARDINO, CA 92408

Owner/operator country: Not reported

Owner/operator telephone: 909-386-4082

Owner/operator email: Not reported

Owner/operator fax: Not reported

Owner/operator extension: Not reported

Legal status: Private

Owner/Operator Type: Owner

Owner/Op start date: Not reported

Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No

Mixed waste (haz. and radioactive): No

Recycler of hazardous waste: No

Transporter of hazardous waste: No

Treater, storer or disposer of HW: No

Underground injection activity: No

On-site burner exemption: No

Furnace exemption: No

Used oil fuel burner: No

Used oil processor: No

User oil refiner: No

Used oil fuel marketer to burner: No

Used oil Specification marketer: No

Used oil transfer facility: No

Used oil transporter: No

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 08/21/2007
Comments: According to Tetra Tech, access was no longer possible to indoor locations where the sub-slab samples were previously collected. The drill rig access immediately outside and adjacent to these locations were also not possible due to the clearance underneath the building overhang. There are data gaps due to the lack of revised soil gas data from the recommended locations and not implementing changed in sampling techniques provided in DTSC's previous comments. However, DTSC does not anticipate any substantial increase in the risk number beyond the threshold value of risk = 1E-05 from vapor intrusion for this site. Therefore, DTSC recommended that Tetra Tech develop the health risk assessment pertaining to indoor-air vapor intrusion based on the data previously provided to DTSC in the RAW of October 2006 for Parcels B, and A and C. DTSC also recommended that the VOC concentrations from the samples collected from the previous and the most recent sampling event should be used to evaluate the indoor-air risk assessment to the current commercial workers. Moreover, the indoor-air risk assessment should be performed using the highest VOC concentrations that provide maximum risk and hazard values from all soil gas data performed so far.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 06/13/2006
Comments: DTSC sent revised approval letter for the Phase 1, requiring the completion of a Phase 1 Addendum instead of a PEA. A PEA was required in the first determination on October, 2004; however, additional information regarding groundwater beneath the site was provided in the groundwater memo. Based on the Additional information DTSC revised the determination.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/11/2017	Source: EPA
Date Data Arrived at EDR: 12/22/2017	Telephone: N/A

Number of Days to Update: 14	Next Scheduled EDR Contact: 04/16/2018
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/11/2017	Source: EPA

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/05/2017	Telephone: 703-603-8704

Number of Days to Update: 92	Next Scheduled EDR Contact: 04/16/2018
	Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 07/11/2017	Source: EPA
Date Data Arrived at EDR: 07/21/2017	Telephone: 800-424-9346
Date Made Active in Reports: 10/06/2017	Last EDR Contact: 12/22/2017
Number of Days to Update: 77	Next Scheduled EDR Contact: 01/29/2018
	Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 09/13/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/26/2017	Telephone: (415) 495-8895

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/13/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/26/2017	Telephone: (415) 495-8895
Date Made Active in Reports: 10/06/2017	Last EDR Contact: 12/26/2017

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 09/13/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/26/2017	Telephone: (415) 495-8895

Number of Days to Update: 10	Next Scheduled EDR Contact: 04/09/2018
	Data Release Frequency: Quarterly

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/13/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/26/2017	Telephone: (415) 495-8895

Federal institutional controls / engineering controls registries

LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 05/22/2017	Source: Department of the Navy
Date Data Arrived at EDR: 06/13/2017	Telephone: 843-820-7326
Date Made Active in Reports: 09/15/2017	Last EDR Contact: 11/08/2017
Number of Days to Update: 94	Next Scheduled EDR Contact: 02/26/2018
	Data Release Frequency: Varies

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 08/10/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/30/2017	Telephone: 703-603-0695
Date Made Active in Reports: 10/13/2017	Last EDR Contact: 11/27/2017
Number of Days to Update: 44	Next Scheduled EDR Contact: 03/12/2018
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 08/10/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/30/2017	Telephone: 703-603-0695

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board's review found that more than one-third of the region's active disposal pits are operating without permission.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
NOT AVAILABLE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile ESE
Site Name:	Southwest Metal Co
Site EPA ID Number:	CAT000624106
Groundwater Flow Direction:	SE ON A REGIONAL BASIS.
Measured Depth to Water:	24.5 feet.
Hydraulic Connection:	The surficial and lower aquifers appear to be hydraulically connected because of the absence of clay layers above 300 feet deep.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: TUJUNGA

Soil Surface Texture: gravelly loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	35 inches	gravelly loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.1
2	35 inches	59 inches	gravelly sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: GRANGEVILLE

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 9 Min: 7.9
2	11 inches	59 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 6.6

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations

Source: Department of Conservation

Telephone: 916-323-1779

Oil and Gas well locations in the state.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ninyo & Moore were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ninyo & Moore were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ninyo & Moore were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ninyo & Moore were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Contact: Dennis Fee

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ninyo & Moore were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

A horizontal number line representing distance in feet. The line starts at 0 and ends at 600. Major tick marks are labeled at 0, 150, 300, and 600. There are two horizontal brackets above the line. The first bracket spans from 0 to 150 and is labeled "150 feet". The second bracket spans from 150 to 300 and is also labeled "150 feet". A third bracket spans from 300 to 600 and is labeled "300 feet".

EDR Historical Topo Map Report

01/11/18

Site Name:

Mount Vernon Avenue Bridge F
Burlington Northern and Santa
San Bernardino, CA 92411
EDR Inquiry # 5157036.4

Client Name:

Ninyo & Moore
475 Goddard
Irvine, CA 92618
Contact: Dennis Fee

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Ninyo & Moore were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:**Coordinates:**

P.O.#	205732004	Latitude:	34.106165 34° 6' 22" North
Project:	Initial Site Assessment	Longitude:	-117.314222 -117° 18' 51" West
		UTM Zone:	Zone 11 North
		UTM X Meters:	471018.37
		UTM Y Meters:	3773972.01
		Elevation:	1089.25' above sea level

APPENDIX E

Vapor Encroachment Screening

Phase I Environmental Site Assessment (ESA) Vapor Encroachment Conditions (VEC) matrix includes a (1) Search Radius Test, (2) Chemicals of Concern (COC) Test, and (3) a Critical Distance Test [1].

(1) Search Radius Test: Are there known or suspect contaminated properties in the primary area of concern within the corresponding search radii?

☒ Yes ☐ No If **No**, then screening for a VEC is complete and no VEC *currently* exists, go to #4. If **Yes**, then:

(2) Chemicals of Concern Test: Are COCs likely to be present within the area of concern for those known or suspect contaminated sites identified based on the Search Distance Test?

☒ Yes ☐ No If **No**, then screening for a VEC is complete and no VEC *currently* exists, go to #4. If **Yes**, then:

(3) Critical Distance Test: A plume test to determine whether or not COCs in the contaminated plume(s) may be within the critical distance.

☐ Yes ☒ No (3a) Is information related to the contaminated plume(s) available (i.e. isoconcentration maps, site drawings, etc.)?

(3b) If **No**, then a VEC cannot be ruled out; check **Yes** in #4 below indicating it is likely a VEC exists. If **Yes**, then:

☐ Yes ☐ No (3c) Is the site less than 100 feet to the nearest edge of a contaminated [non-petroleum hydrocarbon] plume(s)? If **Yes**, then check **Yes** in #4 below indicating it is likely a VEC exists.

☐ Yes ☐ No (3d) Is the site less than 30 feet to the nearest edge of a dissolved petroleum hydrocarbon plume(s)? If **Yes**, then check **Yes** in #4 below indicating it is likely a VEC exists.

If the distance from the nearest edge of a contaminated plume to the nearest existing or planned structure on the site is less than 100 feet for non-petroleum hydrocarbon COC, or less than 30 feet for dissolved petroleum hydrocarbons, then it is presumed that a VEC *currently* exists beneath the site. If the distance from the nearest edge of the contaminated plume is greater than or equal to 100 feet for non-petroleum hydrocarbons, or 30 feet for dissolved petroleum hydrocarbon chemicals of concern, then it is presumed unlikely that a VEC *currently* exists beneath the site.

(4) Is it likely that a VEC *currently* exists beneath the site?

☒ Yes ☐ No If **No**, then the VEC screening is complete and no further investigation is recommended at this time. If **Yes**, Ninyo & Moore recommends performing additional assessment, such as a Tier 2 VEC assessment according to ASTM E 2600-10.

[1] Based on guidance presented in the ASTM E 2600-10 Standard.
